Guided Discovery

Is about...

+10

The teacher presents students with an example of a specific topic and guides students to an understanding of that topic.

Main idea

Planning

Prior to the lesson identify the topic, specify learning objectives, and prepare examples and non-examples. Examples should be high-quality and should contain a variety. The context for examples should also be planned in advance.

Main idea

Implementing

Phase 1- The teacher introduces the lesson and attempts to gain the attention of students.
 Phase 2- The teacher shows the students examples and asks them to make observations and compare the examples.
 Phase 3- The teacher asks more specific questions that are designed to lead students to an understanding of the concept or generalization.
 Phase 4- The teacher guides students to a definition of the concept or a statement of the generalization. The students apply their understanding of the new context.

Main idea

Assessment

Formative- The teacher can assess students by listening to how they answer the questions that she asks.
 Summative- Teachers can formally assess students by having them create examples of what they learned during the lesson.

Main idea

Motivation

Students get a chance to take control of their learning. They don't have to listen to a lecture, but rather form their own understanding by exploring the topic. The retention of information can be rewarding for those that normally forget everything that they hear in a lecture.

So what? What is important to understand about this?

This model will take up more time, but guided learning results in a deeper understanding than lectures and explanations.

Resources for Teaching Elementary School Science National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution, 1996-03-28. What activities might a teacher use to help children explore the life cycle of butterflies? What does a science teacher need to conduct a leaf safari for students? Where can children safely enjoy hands-on experience with life in an estuary? Selecting resources to teach elementary school science can be confusing and difficult, but few decisions have greater impact on the effectiveness of science teaching. Educators will find a wealth of information and expert guidance to meet this need in **Resources for Teaching Elementary School Science**. A completely revised edition of the best-selling resource guide **Science for Children**, **Resources for Teachers**, this new book is an annotated guide to hands-on, inquiry-centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade. Companion volumes for middle and high school are planned. The guide annotates about 350 curriculum packages describing the activities involved and what students learn. Each annotation lists recommended grade levels, accompanying materials and kits, or suggested equipment and ordering information. These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to ask questions and find their own answers. Experiment productively. Develop patience, persistence, and confidence in their own ability to solve real problems. The entries in the curriculum section are grouped by scientific area: Life Science, Earth Science, Physical Science, and Multidisciplinary and Applied Science, and by type: core materials, supplementary materials, and science activity books. Additionally, a section of references for teachers provides annotated listings of books about science and teaching, directories and guides to science trade books and magazines that will help teachers enhance their students' science education. **Resources for Teaching Elementary School Science** also lists, by region and state, about 600 science centers, museums, and zoos where teachers can take students for interactive science experiences. Annotations highlight almost 300 facilities that make significant efforts to help teachers. Another section describes more than 100 organizations from which teachers can obtain more resources. And a section on publishers and suppliers gives names and addresses of sources for materials. The guide will be invaluable to teachers, principals, administrators, teacher trainers, science curriculum specialists, and advocates of hands-on science teaching, and it will be of interest to parent-teacher organizations and parents.
