

Sea Floor Spreading

Purpose

The purpose of this lab is to have you utilize the age and positions of rock formations associated with the Mid Atlantic Ridge to support the hypothesis of sea floor spreading. The sea floor spreading hypothesis presents the idea that new crust is continually being formed at the center of mid-ocean ridges, which is causing the sea floor to spread apart from the ridge centers. This is believed to be the mechanism that causes the Earth's tectonic plates to move.

Materials

metric ruler

colored pencils

Procedure

Complete the following steps.

1. Using the map in Figure 15-1, color in the various rock formations associated with both the Mid Atlantic and East Pacific ridge systems. Create a color key that shows the color associated with each specific rock age.
2. After you have created a map showing the relationship between the age of rock and location to the ridge system center, calculate an average spreading rate associated with each ridge. To calculate the average spreading rate for the Mid Atlantic Ridge, use the following procedure. Show all work.
 - a. Measure the distance in centimeters from the Mid Atlantic Ridge to the interface between rock sequences 4 and 5 in three different places on your map. Record your answers below.

Measurement 1 = 2.5 cm

Measurement 2 = 2.6 cm

Measurement 3 = 2.1 cm

- b. Determine the average distance of the three measurements to the nearest tenth of a centimeter. Show your work and record your average distance to the nearest tenth of a centimeter.

Reconstructing Earth's Climate History Kristen St. John, R. Mark Leckie, Kate Pound, Megan Jones, Lawrence Krissek, 2021-09-27 Reconstructing Earth's Climate History There has never been a more critical time for students to understand the record of Earth's climate history as well as the relevance of that history to understanding Earth's present and likely future climate There also has never been a more critical time for students as well as the public at large to understand how we know as much as what we know in science This book addresses these needs by placing you the student at the center of learning In this book you will actively use inquiry based explorations of authentic scientific data to develop skills that are essential in all disciplines making observations developing and testing hypotheses reaching conclusions based on the available data recognizing and acknowledging uncertainty in scientific data and scientific conclusions and communicating your results to others The context for understanding global climate change today lies in the records of Earth's past as preserved in archives such as sediments and sedimentary rocks on land and on the seafloor as well as glacial ice corals speleothems and tree rings These archives have been studied for decades by geoscientists and paleoclimatologists Much like detectives these researchers work to reconstruct what happened in the past as well as when and how it happened based on the often incomplete and indirect records of those events preserved in these archives This book uses guided inquiry to build your knowledge of foundational concepts needed to interpret such archives Foundational concepts include interpreting the environmental meaning of sediment composition determining ages of geologic materials and events supported by a new section on radiometric dating and understanding the role of CO₂ in Earth's climate system among others Next this book provides the opportunity for you to apply your foundational knowledge to a collection of paleoclimate case studies The case studies consider long term climate trends climate cycles major and or abrupt episodes of global climate change and polar paleoclimates New sections on sea level change in the past and future climate change and life and climate change and civilization expand the book's examination of the causes and effects of Earth's climate history In using this book we hope you gain new knowledge new skills and greater confidence in making sense of the causes and consequences of climate change Our goal is that science becomes more accessible to you Enjoy the challenge and the reward of working with scientific data and results Reconstructing Earth's Climate History Second Edition is an essential purchase for geoscience students at a variety of levels studying paleoclimatology paleoceanography oceanography historical geology global change Quaternary science and Earth system science *Scientific and Technical Aerospace Reports*, 1995 *Lab Exercises to Invitation T Pb* Pinet, 2003-03 Biology, 1987 **U.S. Government Research & Development Reports**, 1971 **Glencoe Science** McGraw-Hill Staff, 2001-06 **Abstracts of North American Geology** Geological Survey (U.S.), 1970-07 Selected Water Resources Abstracts, 1990 Aquatic Sciences and Fisheries Abstracts, 1978 Glencoe Earth Science Ralph M.
