Green Stormwater Infrastructure Fundamentals and Design Allen P. Davis, William F. Hunt, Robert G. Traver, 2022-06-07 *Green Stormwater Infrastructure Fundamentals and Design* Discover novel stormwater control measures to make for a greener tomorrow The protection of our aquatic resources is growing in importance as the effects of climate change and continued urbanization are felt throughout the world While most rain that falls onto vegetated spaces infiltrates the soil rain that falls onto impervious surfaces will not increasing downstream flooding and erosion and causing impaired water quality Impervious surfaces such as road infrastructure rooftops and parking areas all increase runoff and mobilize many pollutants that have deposited on these surfaces that are then carried into our waterways Proper management of this stormwater through green infrastructure is essential to address these challenges and reduce the

environmental and ecological impacts brought about by this runoff This book brings into focus resilient stormwater control measures SCMs for the reduction of stormwater flows and associated pollutants that can detrimentally impact our local environmental and ecological systems These interventions are green infrastructure based utilizing natural hydrologic and environmental features using soil and vegetation to manage stormwater These technologies include water harvesting bioretention and bioinfiltration vegetated swales and filter strips permeable pavements sand filters green roofs and stormwater wetlands among others The basic science and engineering of these technologies is discussed including performance information and best maintenance practices Green Stormwater Infrastructure readers will also find Research informed resilient SCM design fundamentals Diagrams developed by the authors to enhance understanding Case studies to illustrate the points elucidated in the book End of chapter problems with a separate solutions manual Green Stormwater Infrastructure is an ideal resource for environmental civil and biological engineers and environmental scientists in the consulting field Landscape architects managers and engineers of watershed districts and members of federal state and local governmental agencies especially those in the departments of environmental protection and transportation will find many uses for this guidebook It will also be of interest to professors upper level undergraduates and graduate students in environmental civil and biological engineering programs

Sustainable Management of Urban Water Resources Susanne Charlesworth,Craig Lashford,2021-01-28 It is well known that 55% of the world s population currently lives in urban areas and this figure is predicted to grow to 68% by 2050 adding more than 2.5 billion people to urban populations It is also projected that there will be 43 megacities worldwide by 2030 with populations of more than 10 million inhabitants The United Nations World Water Development Report 2018 warned that by 2030 the global demand for fresh water is likely to exceed supply by 40% Added to population growth climate change has the potential to lead to changes in rainfall regimes with the potential of increased flooding and drought Currently 1.2 billion people are at risk from flooding but this is predicted to increase to about 1.6 billion i.e. nearly 20% of the total world population by 2050 In line with this replacing deteriorating water management infrastructure that can no longer cope is economically unfeasible impracticable from a construction point of view and likely to fail in the long term To address these issues approaches are needed that are flexible and have multiple benefits In its World Water Development Report 2018 the UN promotes the use of nature based solutions to some of these problems with the focus of Sustainable Development Goal 6

making sure that everyone has access to a safe and affordable supply of potable water and sanitation by 2030 requiring investment in suitable infrastructure across the world This Special Issue covers the challenges faced in managing urban water in all its forms from potable supplies to reuse and harvesting as well as resilient and sustainable approaches developed to address flooding and drought

Stormwater Management for Transportation Facilities Shaw L. Yu,1993 This synthesis will be of interest to highway design engineers maintenance engineers environmental personnel administrators and others responsible for the design operation and maintenance of stormwater management for highways and ancillary facilities Information is presented on the basic hydrology needed to assess stormwater impacts and on the effectiveness of stormwater management techniques Designers of highway facilities must consider stormwater management requirements within the context of both localized runoff impacts as well as downstream effects of runoff This report of the Transportation Research Board describes the management of both stormwater quantity and stormwater quality Stormwater quantity includes an overview of methods of estimating runoff and management control practices Stormwater quality management includes discussions of the most prevalent pollutants and best management practices BMP to minimize pollutants from transportation facilities Various types of structural and non structural methods are described including their design considerations and efficiencies Several stormwater management models are described with special concern for highway applications Highlights from the 1990 National Pollutant Discharge Elimination System NPDES permits are presented

Living Roofs in Integrated Urban Water Systems Daniel Roehr,Elizabeth Fassman-Beck,2015-03-05 With the infrastructure to manage storm water threats in cities becoming increasingly expensive to build or repair the design community needs to look at alternative approaches Living roofs present an opportunity to compliment ground level storm water control measures contributing to a holistic integrated urban water management system This book offers tools to plan and design living roofs in the context of effectively mitigating storm water Quantitative tools for engineering calculations and qualitative discussion of potential influences and interactions of the design team and assembly elements are addressed

Handbook of Water Sensitive Planning and Design Robert L. France,2002-05-29 Design options and planning procedures must be critically examined to ensure that landscapes are created with sensitivity to water quality and management issues as well as overall ecological integrity Handbook of Water Sensitive Planning and Design presents the history of water as a design and planning element in landscape architecture and describes new interpretations of water management This text pushes the frontiers of standard water management in new directions challenging readers into abandoning the comfortable safety of conducting business as usual within narrow disciplinary confines and instead directing views outward to the exciting and incompletely mapped regions of true interdisciplinary water sensitive planning

and design With contributions from renowned practitioners Part I provides seventeen chapters addressing the subject of site specific water sensitive design and Part II presents another seventeen chapters focusing on issues relating to the water sensitive planning of riparian buffers and watersheds In addition Professor France has provided a Response to accompany each chapter which succinctly underscores the salient features in more detail and emphasizes cross linking to other chapters in the book The Overview provides a brief road map to navigate through the section Finally the discussion summaries at the end of each section elaborate on past problems current challenges and future directions Handbook of Water Sensitive Planning and Design puts forward the very best of modern water sensitive planning and design and should be required reading for everyone involved in this dynamic and crucial field

Water Resources Management VIII C.A. Brebbia,2015-06-15 Water Resources Management VIII contains papers presented at the eighth conference in a biennial series organised by the Wessex Institute First held in 2001 the Conference includes the work of scientists practitioners and other experts regarding the sustainable management of water resources It is predicted that population growth and irregular precipitation due to climate change may lead to more restricted access to water in certain regions of the world The problem will be aggravated by human activities that affect the quality of available water In order to improve strategies for dealing with a scarcity of potable water it is important to review and compare the performance of current technologies and practices in order to select those that will provide the most effective approaches It is also important that technologies and practices be able to respond with agility to changing conditions New ways of thinking are required in order to successfully predict future trends and prepare adequate sustainable solutions The papers included in this book cover such topics as Water Management and Planning Water Rights and Accessibility Water Markets and Policies Climate Change Irrigation Urban Water Management Hydraulic Engineering Water Quality Pollution Contaminants and Control River Basin Management Flood Risk Management Geo politics of Water Water Resources and Economics Governance and Regulations Desalination Water Services
