Service Life Estimation and Extension of Civil Engineering Structures Vistasp M. Karbhari, L S Lee, 2010-12-20 Service life estimation is an area of growing importance in civil engineering both for determining the remaining service life of civil engineering structures and for designing new structural systems with well defined periods of functionality Service life estimation and extension of civil engineering structures provides valuable information on the development and use of newer and more durable materials and methods of construction as well as the development and use of new techniques of estimating service life Part one discusses using fibre reinforced polymer FRP composites to extend the service life of civil engineering structures It considers the key issues in the use of FRP composites examines the possibility of extending the service life of structurally deficient and deteriorating concrete structures and investigates the uncertainties of using FRP composites in the rehabilitation of civil engineering structures Part two discusses estimating the service life of civil engineering structures including modelling service life and maintenance strategies and probabilistic methods for service life estimation It goes on to investigate non destructive evaluation and testing NDE NDT as well as databases and knowledge based systems for service life estimation of rehabilitated civil structures and pipelines With its distinguished editors and international team of contributors Service life estimation and extension of civil engineering structures is an invaluable resource to academics civil engineers construction companies infrastructure providers and all those with an interest in improving the service life safety and reliability of civil engineering structures A single source of information on the service life of reinforced concrete and fibre reinforced polymer FRP rehabilitated structures Examines degradation mechanisms in composites for rehabilitation considering uncertainties in FRP reliability Provides an overview of probabilistic methods for rehabilitation and service life estimation of corroded structures

Local and Regional Funding Mechanisms for Public Transportation, 2009 Framework for Collaborative Decision Making on Additions to Highway Capacity ICF International, URS Corporation, Transportation Research Board, This report from the second Strategic Highway Research Program SHRP 2 which is administered by the Transportation Research Board of the National Academies describes a framework including for long range planning corridor planning project programming environmental review and environmental permitting that supports collaborative business practices for reaching decisions on adding highway capacity when necessary
