 uncomplicated but scholarly and comprehensive **Elsevier's Dictionary of Medicine and Biology G.**

Konstantinidis,2005-08-18 Dictionaries are didactic books used as consultation instruments for self teaching They are
 composed by an ordered set of linguistic units which reflects a double structure the macrostructure which correspond to the
 word list and the microstructure that refers to the contents of each lemma The great value of dictionaries nests in the fact
 that they establish a standard nomenclature and prevent in that way the appearance of new useless synonyms This dictionary
 contains a total of about 27 500 main English entries and over of 130 000 translations that should normally sufficiently cover
 all fields of life sciences The basic criteria used to accept a word a part of the dictionary during the development period in
 order of importance were usage up to dateness specificity simplicity and conceptual relationships The dictionary meets the
 standards of higher education and covers all main fields of life sciences by setting its primary focus on the vastly developing
 fields of cell biology biochemistry molecular biology immunology developmental biology microbiology genetics and also the
 fields of human anatomy histology pathology physiology zoology and botany The fields of ecology paleontology systematics
 evolution biostatistics plant physiology plant anatomy plant histology biometry and lab techniques have been sufficiently
 covered but in a more general manner The latest Latin international anatomical terminology Terminologia Anatomica or TA
 has been fully incorporated and all anatomical entries have been given their international Latin TA synonym This dictionary
