[Integrating Crystal Reports into an ASP.NET Application](#) Vincent Varallo, 2010-11-17. This Wrox Blox provides step by step instructions on how to incorporate the Crystal Reports for .NET into an ASP .NET application. Reporting is a key ingredient for polishing up applications especially enterprise applications or line of business applications. You can quickly and easily build an ASP .NET application that allows a manager to run reports to get this information rather than display it in a simple HTML page. In this Wrox Blox you'll learn how to dynamically format reports easily group data display subtotals as well as grand totals sort data filter data and even export the report as a PDF. There are plenty of applications that allow users to enter data into a database but for some reason reports always seem to be forgotten when it comes to designing the application. For many business applications a report is the only output the person paying for the application is looking for. How fast are the data entry operators entering data? How many support calls are being logged? How many bugs are in the application? Do these types of requests sound familiar? It's usually upper management asking these questions and the last thing you want them to do is actually go into the application to get this information that opens up a whole new can of worms. Crystal Reports for .NET truly is a magnificent tool to polish off your application and keep your managers happy while keeping the users productive.
