Making the Connection Marilyn Paula Carlson,Chris Rasmussen,2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction **Processing of Visible Language** Paul A.

Kolers,2013-11-21 The second symposium on processing visible language constituted a different mix of participants from the

first Greater emphasis was given to the design of language both in its historical development and in its current display and to practical questions associated with machine implementation of language in the interactions of person and computer and in the characteristics of the physical and environmental objects that affect the interaction Another change was that a special session on theory capped the proceedings Psychologists remained heavily involved however both as contributors to and as discussants of the work presented The motivation of the conferences remains one of bringing together graphic designers engineers and psychologists concerned with the display and acquisition of visible language The papers separately tended to emphasize the one of the three disciplines that mark their authors field of endeavor but are constructed to be general rather than parochial Moreover within the three disciplines papers emphasized either the textual or the more pictorial aspects For example a session on writing systems ranged from principles that seem to characterize all such systems to specific papers on ancient Egyptian writing modern Korean and English shorthand The complementary session on the nontextual media opened with a discussion of general principles of pictorial communication and included papers on communicating instructions general information or religious belief through designs and other pictorial forms as well as a discussion of misrepresentation
