## Color Psychology Paper

### Research Question:

How does color affect one's mood?

### Review of Literature:

Colors may just seem simple and unimportant, but they affect our daily lives more than we may know. If someone is feeling angry, it could just be because they're angry, or it could be perhaps that they are surrounded by or looking at the color red. That's right! People's moods can change just because they are looking at different colors! There are many theories on how just a simple color can change one's whole mood.

According to Johnson (2007), color does affect mood by producing certain chemicals and stimulating different feelings such as hunger. For example, blue can make one feel calm because it releases calming chemicals, and red can make one hungry because it is an appetite stimulant. Yellow can make one feel irritated, and it is a fact that people lose their temper most in yellow rooms. However, pink is tranquilizing and can make one feel weak. In conclusion, Johnson says that depending on the color, one's body can do things (like producing chemicals) that cause a certain emotional reaction (mad, sad, etc.).

Another idea, by Smith (2007), is that the effect color produces is based on what one's body does in response. For example, yellow is mentally stimulating, and activates memory, whereas red increases confidence. Also, brown can make a person feel orderly and stable, while a dark blue can make one feel sad. Therefore, Smith says that different colors do in fact change one's mood and the consequences can be negative or positive.

A third writer, Wollard, (2000) seems to think that color can affect one's mood, but the effect also can depend on one's culture and what one's personal reflection may be. For example, someone from Japan may not associate red with anger, as people from the U.S. tend to do. Also, a person who likes the color brown may associate brown with happiness. However, Wollard does think that colors can make everyone feel the same, or close to the same, mood. According to Wollard, pink reduces aggression, which is why the walls of the jail cells in the Seattle prison are pink! Also, brown can make one feel comforted. Wollard feels that colors do affect one's mood, but there are other factors that can alter what one is supposed to feel.

Eric, John, and Paraag's (2007) main point about color psychology is that color has both a physiological and psychological effect. For example, green makes people feel relaxed because it relaxes their muscles and makes them breathe deeper and more slowly. Furthermore, blue lowers blood pressure, which makes one feel calm. Eric, John, and Paraag conclude that color affects one's mood because of what it does to the body.

Support for the conceptual design stage of effective and resource-efficient offerings Sergio Brambila, 2020-10-20 Human activities in the form of production and consumption have increased to an all time high In many cases this increase has resulted in environmental problems such as waste and pollution that in turn affect our health and way of living Societies have proposed different measures to address such environmental problems These range from different waste treatment technologies to alternative business models policy measures and lifecycle thinking in the design of products to mention but a few In this research the focus is on supporting early design activities of what is often called the conceptual design stage with the objective to provide effective and resource efficient offerings The early design activities considered here are planning analysis and evaluation Design researchers have largely supported these three activities with a variety of methods and tools However previous research has shown that design support coming from academia has had a low uptake in industry In this regard the aim of this research is to propose not only useful but also usable support for design practitioners during the conceptual design stage This research is carried out in the manufacturing sector in Sweden where selected companies expressed an interest in collaborating with academia to address more thoroughly effective and resource efficient offerings To better match company needs and research from academia this research took a pragmatic and cross disciplinary approach This research approach along with literature reviews semi structured interviews workshops and questionnaires shows different ways in which support can be made more useful and usable The main gap addressed here is that the knowledge and the related skills of the user of the support have not been sufficiently explored The results include requirements of the user of the support proposed methods and tools derived from the requirements identified and most importantly the knowledge and skills needed by the user of the support The main message of this research is that support could be expanded from methods and tools to include knowledge and skills needed by design practitioners the users of support The flow of support from academia to industry could also be reinforced in a two way flow through a pragmatic and cross disciplinary approach to first and foremost address
