Abstract

Radium (Ra), Fermium (Fm), and Americium (Am) are elements belong to the actinide series (Actinides are a group of elements with atomic numbers ranging from 90 to 103, all of which are radioactive and have similar chemical properties) and were discovered or synthesized in the 20th century. They have varying levels of radioactivity and toxicity, and their properties make them useful in different applications.

INTRODUCTION

Radium (Ra), Fermium (Fm), and Americium (Am) are three elements with unique properties and uses. Radium is a highly radioactive metal that was discovered in 1898 by Marie and Pierre

Curie. It is used in some medical treatments, such as radiation therapy for cancer, but is highly toxic and can cause health problems if not handled properly.

Fermium is a synthetic element that was first synthesized in 1952 by a team of scientists led by Glenn T. Seaborg. It is highly radioactive and has no known uses outside of scientific research.

Americium is also a synthetic element that was first produced in 1944 by a team of scientists led by Glenn T.

ANALYSIS

Radium (Ra) is a highly radioactive element that belongs to the alkaline earth metals group. It was discovered by Marie and Pierre Curie in 1898 and named after the Latin word "radius," which means ray, due to its high radioactivity. Radium is silvery-white in color and has a melting point of 700°C. It is a rare element found in uranium ores and other minerals. Radium is known for its high radioactivity and emits alpha, beta, and gamma rays. It has a half-life of 1600 years, which means it takes that amount of time for half of the radium atoms to decay. This property

makes it useful in various applications such as cancer treatment, where it is used to destroy cancer cells. However, radium is also highly reactive and can react with water, oxygen, and other elements to form compounds. This property makes it dangerous to handle, as it can cause burns and other health problems if ingested or inhaled.

Parvathy, Dr. M. Umayavalli, Dr. P. Ramu, Mrs. V. Manjula, 2023-07-28 The researcher s inner world is formed by his or her choice of research methodology which considers the nature of the study and the researcher s philosophy time frame and other contextual factors Furthermore the research methodology works as the central nervous system since it limits the scope of the investigation and because proper research work necessitates that both the internal and exterior surroundings adhere to the correct research methodology procedure Research methodologies refer to the procedures used to assemble information for studies The data might be used for theoretical or applied studies such as the strategic conceptualization of management research operational planning methodologies and change management Most of your work will be done when you complete the data analysis However before you start you need to consider specific crucial issues in research technique such as the validity of research data ethics and dependability After this comes the research plan which might be either purely experimental or include some elements of experimentation The last two steps are analyzing the data and producing the research report The data is meticulously sorted into graphs tables and only the most relevant information is presented A researcher must develop a research approach appropriate to the study s subject matter It is essential to remember that even if two topics need the same study approach the research technique might differ **A Textbook of Herbal Drug Technology** Prof. (Dr.) Stuti Verma, Prof.(Dr.) Rahul Kumar Sharma, Prof.(Dr.) Anup Kumar Sirbaiya, Mr. Rajeev Kumar, Mrs. Priyanka Yadav, Mr. Gulam Muheyuddeen, 2025-06-12 Herbal Drug Technology presents a comprehensive and scientific approach to the study of herbal medicines aligning traditional healing systems with modern pharmaceutical practices Intended primarily for pharmacy students and aligned with the PCI curriculum the book also serves as a valuable reference for researchers practitioners of Ayurveda and allied systems and professionals in the herbal drug and nutraceutical industries It explores the journey of herbal drugs from plant to product covering topics such as plant taxonomy collection and authentication of raw materials pharmacognostic evaluation phytochemical extraction formulation development and analytical techniques for standardization The book also delves into herbal cosmetics nutraceuticals and the use of advanced techniques like chromatography and spectroscopy for quality assurance It addresses global and Indian

regulatory requirements intellectual property rights and ethical aspects of bioprospecting With case studies current industry practices and comparative insights from traditional and modern medicine this text goes beyond the basics to build a strong conceptual and practical foundation for future professionals in herbal healthcare *Catalogue* Kansas State Agricultural College, Kansas State College of Agriculture and Applied Science, Kansas State University, 1920
