Reviewed article: Peter, Uno, "Accountability and Administrators: Value Systems and their Value in the Public Domain", Societal Integrity, Spring, 2010, Vol. 12, No. 6, pp. 337-345.

The article, "Accountability and Administrators: Value Systems and their Value in the Public Domain", by Uno Peter looks into addressing how value systems and accountability interact in all of the decisions given by public administrators. The problem addressed in this research is whether administrators are void of accountability for decisions, including various influences which can impact their decisions.

It is clear from the article abstract that the issue is not simple. As a matter of fact, the article is quite confusing, especially in its first two paragraphs. The writer started by explaining that ethical codes of referential systems become easier to hold accountability for individuals, especially when it comes to their actions. However, an issue emerges when the moral values of an individual tend to become different from the accountability policies. What make accountability even more complicated are the goals of the administrator, as well as the inability of an individual to perceive consequences in the future.

Another potential influence is the existence of an actual social context. The different domains lay down the standards of behavior. This social environment can help a certain individual in determining a good decision in contrast to a bad one. At the same time, it also complicates the concept of accountability.

Overall, the article is not very straightforward at the start. It is not only until the second page when you realized the focus of the article. Once a reader understands the good examples, the point is taken.
