Toolbox Edward F. McQuarrie, 2006 An ideal resource for those who want to conduct market research but have little experience in doing so The Market Research Toolbox describes how to think of market research in the context of making a business decision The book begins by defining market research and discussing some of the various types and techniques It then examines what objectives can be met by doing market research and the expected payoffs Six traditional market research techniques are covered secondary research customer visits focus groups surveys choice modelling and experimentation The author describes how each technique works along with its costs and uses tips for success when and how to use certain techniques and precautions to take while using them Next McQuarrie discusses nontraditional types of market research that have evolved in recent years to meet the needs of business to business marketers and technology firms The volume concludes with a chapter on five common business applications that can be addressed by combining several individual research techniques into a research strategy New to the Second Edition Chapters 1 and 2 have been extensively revised and updated based on feedback from students Chapter 3 on secondary research includes a new section on Internet research Chapter 6 will be split into two chapters one to focus on survey research procedures and the other to focus on questionnaire design Chapter 7 will be revised to focus almost exclusively on conjoint analysis a key tool Chapter 9 will be deleted and relevant material will be moved to other chapters Chapter 10 will be expanded to include new topics such as forecasting An Instructors Resource on CD ROM will be made available to lecturers adopting the book for course use It contains PowerPoint slides case questions teaching notes for suggested cases that can be linked to the book and a sample syllabus

Developing Research Proposals Pam Denicolo, Lucinda Becker, 2012-01-20 Writing a research proposal is one of the most important tasks facing academics researchers and postgraduate students Yet there is a good deal of misinformation and a great lack of guidance about what constitutes a good research proposal and what can be done to maximise one's chances of writing a successful research proposal Denicolo and Becker recognise the importance of developing an effective research proposal for gaining either a place on a research degree programme or funding to support research projects and set out to explore the main factors that that proposal writers need to attend to in developing successful proposals of their own Developing Research Proposals will help readers to understand the context within which their proposal will be read what the reviewers are looking for and will be influenced by while also supporting the development of relevant skills through advice and practical activities This book Explores the nature and purpose of different kinds of proposals Focuses on the actual research proposed Discusses how best to carry out and structure the literature review Examines the posing and phrasing of research questions and hypotheses Looks at how methods and methodology should be handled in a proposal Discusses the crucial issues of planning strategy and timing in developing targeted proposals Denicolo and Becker draw together the key elements in the process of preparing and submitting a proposal and concludes with advice on responding to the results successful or not and their relevance to future proposals The Success in Research series from Cindy Becker and Pam

Denicolo provides short authoritative and accessible guides on key areas of professional and research development. Avoiding jargon and cutting to the chase of what you really need to know, these practical and supportive books cover a range of areas from presenting research to achieving impact and from publishing journal articles to developing proposals. They are essential reading for any student or researcher interested in developing their skills and broadening their professional and methodological knowledge in an academic context. Scientific Research in Information Systems Jan Recker, 2021-10-21

This book introduces higher degree research students and early career academics to scientific research as occurring in the field of information systems and adjacent fields such as computer science, management science, organization science, and software engineering. Instead of focusing primarily on research methods as many other textbooks do, it covers the entire research process from start to finish, placing particular emphasis on understanding the cognitive and behavioural aspects of research such as motivation, modes of inquiry, theorising, planning for research, planning for publication, and ethical challenges in research. Comprehensive but also succinct and compact, the book guides beginning researchers in their quest to do scholarly work and to assist them in developing their own answers and strategies over the course of their work. Jan Recker explains in this book the fundamental concepts that govern scientific research and then moves on to introduce the basic steps every researcher undertakes: choosing research questions, developing theory, building a research design, employing research methods, and finally writing academic papers. He also covers essentials of ethical conduct of scientific research. This second edition contains major updates on all these elements, plus significant expansions on relevant research methods such as design research and computational methods, a rewritten and extended chapter on theory development, and expansions to the chapters on research methods, scientific publishing, and research ethics. A companion website provides pedagogical materials and instructions for using this book in teaching.
