(Schiffman 46). It has been estimated that at the current rate of deforestation rain forests of the world would completely vanish in a century.

Reasons of Deforestation

Deforestation can occur due to many reasons ranging from natural to man-made such as earning money and supporting families. However, one of the biggest causes of deforestation is agriculture. Farmers use the land to plant crops after deforestation (Hollar 58). Farmers also cut down trees and burn them in a process referred to as " slash and burn" agriculture (Babin, Unesco, and CIRAD 454). People are also using the land for grazing after deforestation (Hollar 58).

It has been reported that tropical forests are facing an alarming rate of deforestation in order to meet the demands of vegetable oil, meat, and wood products. Vegetable oil such as palm oil is now used not only in cooking but also in many other products such as shampoo and cleaning products (Roquemore 10). In case of meat, a lot of land is required and cleared for meat production, especially beef (Roquemore 11). Provision of wood and paper products also need annual cutting of countless trees. These are known as logging operations. Loggers also build roads by cutting down forests, thereby resulting in more deforestation.

Deforestation is also caused by natural factors such as wildfires as well as overgrazing of animals, thereby preventing the growth of younger trees (Hollar 58).

Harmful Effects of Deforestation

Deforestation is causing a huge loss of beneficial aspects provided by nature. It can affect atmosphere resulting in increased pollution. It can also disturb

Physical Sciences, Mathematics, and Applications,Committee on Global Change,1990-02-01 This book recommends research priorities and scientific approaches for global change research It addresses the scientific approaches for documenting global change developing integrated earth system models and conducting focused studies to improve understanding of global change on topics such as earth system history and human sources of global change *Forest Degradation Around the World* MOHD NAZIP SURATMAN,Zulkiflee Abd Latif,Gabriel De Oliveira,Nathaniel Brunsell,Yosio Shimabukuro,Carlos Antonio Costa Dos Santos,2020-02-26 The growth in the human population has forced mankind to convert forested land into other land uses such as agricultural land residential urban road construction and mining activities The degradation of forest due to anthropogenic activities is significantly reducing forests in the world These practices result in significant impacts on the forest structure species composition and ecology which will consequently reduce forest productivity and ecosystem functions Due to deforestation half of the earth s vegetation surface has reduced to one third resulting in large degraded areas The significant reduction of the forest areas requires appropriate planning for sustainable management of the forests This book reviews the extent and consequences of deforestation around the world It highlights case studies of the causes of deforestation in Malaysia Korea India Bangladesh Columbia Brazil and Mali It is hoped that the book will provide insights on the importance of effective forest planning and management for the sustainable development of forest resources **Forest Resources Management in Indonesia (1968-2004)** Herman Hidayat,2016-02-18 This book explores the forestry sector and its context investigating the management of forest resources in Indonesia It covers topics including forest fires deforestation water pollution depletion of biodiversity climate change and environmental damages The book adopts a political economy approach elaborating on the role of direct actors such as the central government private companies and local governments and the role of indirect actors In addition readers will discover anthropological and sociological perspectives through engagement with local communities such as the Kutai Banjar and Rejang ethnic groups Chinese trading communities NGOs and Academics Featuring interviews with 91 informants and participatory observations the text draws on secondary literature to provide a comprehensive overview of the subject This work is illustrated with figures tables and maps and will be of particular interest to students and researchers of forest policies It makes a valuable contribution to forest sciences and will also be useful to those in non government organizations politicians and business men with an interest in forest resources management or a deeper interest in Indonesia *Tropical Rain Forest: A Wider Perspective* F.B. Goldsmith,2012-12-06 The international perspective for this book is the unprecedented level of concern over deforestation recognized by the meeting of world leaders at the 1992 Earth Summit in Rio do Janeiro and culminating in the appoint ment of the Intergovernmental Panel on Forests IPF under the auspices of the UN Commission on Sustainable Development The wide range of issues covered by the authors in this volume reflects the breadth of the interna tional debate from national policies and activist campaigning through eco nomic and social objectives to the sustainable management of forest and soil

resources Since the conservation campaigns of the 1980s the focus of international concern has widened from tropical rain forests to all forest formations in all regions with increased recognition of global values and common responsibil ities However while forest cover in some temperate countries is increasing irrational deforestation at historically unprecedented levels of damage to biodiversity and to other environmental values remains most acute in tropi cal countries where the need to use the natural resources for sustainable development is greatest and the capability weakest While accepting the urgency of the situation and the need for greater coherence of action at a global level the 1997 report of the IPF to the UN Commission emphasized the powers and responsibilities of national governments and the importance of National Forest Programmes but with the fuller participation of local communities and with enhanced access to international assistance

The Implications of Deforestation Research for Policies to Promote REDD Markku Kanninen,Daniel Murdiyarso,Frances Seymour,Arild Angelsen,Sven Wunder,Laura German,2007-01-01 What do we know about deforestation The direct and underlying causes of deforestation and degradation Policy options for reducing deforestation and degradation Implications for policies and further research to support REDD   **Permit Trading in Different Applications** Bernd Hansjürgens,Ralf Antes,Marianne Strunz,2011-06-16 Permit trading is an environmental policy instrument that has received increasing levels of attention over recent years Coming from the field of air quality management with the European CO2 emissions trading system being the most prominent example it enters new fields of application such as land use policy and biodiversity protection water quality and water quantity trading This book gives an overview of these recent developments and discusses the possibilities and limits of permit trading in environmental policies The advantages of permit trading are not only seen with respect to economic efficiency which leads to achieving the environmental target at minimum cost but also with respect to the instrument s environmental effectiveness By setting a cap for the overall emissions a given environmental target can be met This makes permit trading an interesting case for many environmental fields where safeguarding the environmental target plays a dominant role Against this background permit trading is discussed in environmental policy fields where it has not been considered before for example land use management biodiversity protection and water trading Permit Trading in Different Applications analyses the properties of permit trading its possibilities and limitations its design options and its restrictions on a more general level It demonstrates how lessons learnt in established policy fields like air quality management can be transferred to new and emerging fields of application This collection will provide students and practitioners in environmental sciences and policy with valuable research into instrument choice and design with respect to permit trading   *Women Workers* International Labour Office,1995 Produced from the LABORDOC database lists 953 English language publications technical reports working papers and other documents produced at ILO headquarters or in ILO field offices or prepared in connection

with ILO programmes   **The Performance of REDD+** Bas Arts,Verina Ingram,Maria Brockhaus,2021-09-09 REDD represents countries efforts to reduce emissions from deforestation and forest degradation and foster conservation the sustainable management of forests and the enhancement of forest carbon stocks The basic idea is that more carbon can be sequestrated and stocked in tropical forests by improving their conservation management and sustainable use thus contributing to mitigating climate change The developing countries and relevant stakeholders concerned will be financially compensated for these endeavors either through public funds or private carbon markets Given this context this book will address the need to assess the political and socio economic dimensions of the performance of REDD which is relevant to policy makers practitioners and scholars This implies taking into account the various levels from global to local and dimensions e g results based payments MRV co benefits and community engagement as well as divergent disciplinary connotations of performance We therefore pose the following question What does performance mean In answering this question we provide examples of assessments of performance We present 9 cases of how REDD has performed on local national and international scales and reflect on the representativeness of these examples and their limitations when looking at the current range of REDD initiatives along with what is missing in terms of evaluating the performance of REDD We conclude by establishing why performance assessment remains so relevant today   **The Global Economics of Forestry** William F. Hyde,2012-05-23 This book traces the economic and biological pattern of forest development from initial settlement and harvest activity at the natural forest frontier to modern industrial forest plantations It builds from diagrams describing three discrete stages of forest development and then discusses the management and policy implications associated with each supporting its observations with examples and data from six continents and from both developed and developing countries It shows that characteristic distinctions between the three stages make forestry unusual in natural resource management and that effective policy requires different even contrasting decisions at each stage William F Hyde s comprehensive discussion covers a wide range of issues including the impacts of both specific forest policies and broader macroeconomic policies the unique requirements of current issues such as global warming biodiversity and tourism and the complexities of the different forest products industries Concluding chapters review the roles of the newer institutional landowners of smaller private and farm landowners and of public agencies This highly original volume reaches far beyond forest economics it explains what forestry can do for regional development and environmental conservation and what policies designed for other sectors and the macro economy can do for forestry   *Sustainable Development Goals* Pia Katila,Carol J. Pierce Colfer,Wil de Jong,Glenn Galloway,Pablo Pacheco,Georg Winkel,2019-12-12 A global assessment of potential and anticipated impacts of efforts to achieve the SDGs on forests and related socio economic systems This title is available as Open Access via Cambridge Core
