

Disaster Management: the Case of Hurricane Katrina

✓ Exclusively available on IvyPanda

Introduction

Disasters are an integral part of human existence. A major natural disaster to affect the United States in the recent past was hurricane Katrina, which was a category 2 hurricane that made the first landfall on August 25, 2005.

This hurricane was very powerful and by the time of the second landfall, it had attained speeds of up to 140mph (Rojek and Smith 594). Due to its tremendous negative effects, it is considered to be the most destructive and costly urban disaster in US history. The city that was worst affected by this disaster was New Orleans and the government implemented responses to deal with the situation.

The Federal Emergency Management Agency (FEMA), which is the United State's coordinating arm for natural disaster and catastrophes, headed the disaster response efforts. This paper will set out to review the level of preparedness, response, and recovery efforts undertaken by authorities following Hurricane Katrina in order to highlight shortcomings. Recommendations for improvements will be offered to help increase the probability of better reaction in the event of future disasters.

Analysis of Hurricane Katrina

Preparedness Level

The level of preparedness for natural disasters in 2005 was very low for a number of reasons. To begin with, the government had dedicated most of its resources to fighting terrorism and the war in Iraq.

Chua, Kaynak and Schubert concede that following the 9/11 terror attacks, the US developed a pattern of placing greater emphasis on protecting the country against terrorist attacks (392). More resources were dedicated to Homeland Security thereby undermining the country's preparedness against natural catastrophes such as Katrina.

Research Paper On Hurricane Katrina:

Hurricane Katrina and the Forgotten Coast of Mississippi Susan L. Cutter, 2014-04-07 An interdisciplinary volume on impacts of and recovery from Hurricane Katrina in southern Mississippi for natural hazard researchers students and policy makers *Environmental Public Health Impacts of Disasters* Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Environmental Health Sciences, Research, and Medicine, 2007-07-13 Public health officials have the traditional responsibilities of protecting the food supply safeguarding against communicable disease and ensuring safe and healthful conditions for the population Beyond this public health today is challenged in a way that it has never been before Starting with the 9 11 terrorist attacks public health officers have had to spend significant amounts of time addressing the threat of terrorism to human health Hurricane Katrina was an unprecedented disaster for the United States During the first weeks the enormity of the event and the sheer response needs for public health became apparent The tragic loss of human life overshadowed the ongoing social and economic disruption in a region that was already economically depressed Hurricane Katrina reemphasized to the public and to policy makers the importance of addressing long term needs after a disaster On October 20 2005 the Institute of Medicine's Roundtable on Environmental Health Sciences Research and Medicine held a workshop which convened members of the scientific community to highlight the status of the recovery effort consider the ongoing challenges in the midst of a disaster and facilitate scientific dialogue about the impacts of Hurricane Katrina on people's health *Environmental Public Health Impacts of Disasters Hurricane Katrina* is the summary of this workshop This report will inform the public health first responder and scientific communities on how the affected community can be helped in both the midterm and the near future In addition the report can provide guidance on how to use the information gathered about environmental health during a disaster to prepare for future events **Governing Disasters** Shahla F. Ali, 2016-06-30 Drawing on international state and private sector case studies and a global survey this book examines local engagement in disaster relief **Geospatial Techniques in Urban Hazard and Disaster Analysis** Pamela S. Showalter, Yongmei Lu, 2009-11-11 This book is the second in a series that examines how geographic information technologies GIT are being implemented to improve our understanding of a variety of hazard and disaster situations The main types of technologies covered under the umbrella of GIT as used in this volume are geographic information systems remote sensing not including ground penetrating or underwater systems and global positioning systems Our focus is on urban areas broadly defined in order to encompass rapidly growing and densely populated areas that may not be considered urban in the conventional sense The material presented here is also unabashedly applied our goal is to provide GIT tools to those seeking more efficient ways to respond to recover from mitigate prevent and or model hazard and disaster events in urban settings Therefore this book was created not only with our colleagues in the academic world in mind but also for hazards professionals and practitioners We also believe graduate students will find the material presented here of interest as may

upper division undergraduate students Handbook of Disaster Research Havidán Rodríguez, William Donner, Joseph E. Trainor, 2017-11-16 This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research. It provides an interdisciplinary approach to disasters with theoretical, methodological, and practical applications. Attention is given to conceptual issues dealing with the concept of disaster and to methodological issues relating to research on disasters. These include Geographic Information Systems as a useful research tool and its implications for future research. This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow. *Public Health Reports*, 2007 **Planning for Community-based Disaster Resilience Worldwide** Adenrele Awotona, 2016-10-14 We are witnessing an ever increasing level and intensity of disasters from Ecuador to Ethiopia and beyond devastating millions of ordinary lives and causing long term misery for vulnerable populations. Bringing together 26 case studies from six continents, this volume provides a unique resource that discusses in considerable depth the multifaceted matrix of natural and human made disasters. It examines their bearing on the loss of human and productive capital, the conduct of national policies and the setting of national development priorities and on the nature of international aid and bilateral assistance strategies and programs of donor countries. In order to ensure the efficacy and appropriateness of their support for disaster survivors, international agencies, humanitarian and disaster relief organizations, scholars, non-governmental organizations, and members of the global emergency management community need to have insight into best practices and lessons learned from various disasters across national and cultural boundaries. The evidence obtained from the numerous case studies in this volume serves to build a worldwide community that is better informed about the cultural and traditional contexts of such disasters and better enabled to prepare for, respond to, and finally rebuild sustainable communities after disasters in different environments. The main themes of the case studies include the need for community planning and emergency management to unite in order to achieve the mutual aim of creating a sustainable disaster resilient community coupled with the necessity to enact and implement appropriate laws, policies, and development regulations for disaster risk reduction; the need to develop a clear set of urban planning and urban design principles for improving the built environment; capacities for disaster risk management through the integration of disaster risk reduction education into the curricula of colleges and universities; the need to engage the whole community to build inclusive governance structures as prerequisites for addressing climate change vulnerability and fostering resilience and sustainability. Furthermore, the case studies explore the need to link the existence and value of scientific knowledge accumulated in various countries with decision making in disaster risk management and the relevance and transferability from one cultural context to another of the lessons learned in building institutional frameworks for whole community partnerships. *Dealing with Disaster* Sandra K. Schneider, 2014-12-18 Now updated with examples through 2010, this classic study examines the disruptive effects of disasters on patterns of human behavior and the operations of government.

and the conditions under which even relatively minor crises can lead to system breakdown **Disaster Case Management** United States. Congress. Senate. Committee on Homeland Security and Governmental Affairs. Ad Hoc Subcommittee on Disaster Recovery,2010 **Media and Mass Atrocity** Allan Thompson,2019-04-05 When human beings are at their worst as they most certainly were in Rwanda during the 1994 genocide the world needs the institutions of journalism and the media to be at their best Sadly in Rwanda the media fell short Media and Mass Atrocity revisits the case of Rwanda but also examines how the nexus between media and mass atrocity has been shaped by the dramatic rise of social media It has been twenty five years since Rwanda slid into the abyss The killings happened in broad daylight but many of us turned away A quarter century later there is still much to learn about the relationship between the media and genocide an issue laid bare by the Rwanda tragedy Media and Mass Atrocity revisits the debate over the role of traditional news media in Rwanda where confronted by the horrors taking place international news media for the most part turned away and at times muddled the story when they did pay attention Hate media outlets in Rwanda played a role in laying the groundwork for genocide and then actively encouraged the extermination campaign The news media not only failed to fully grasp and communicate the genocide but mostly overlooked the war crimes committed during the genocide and in its aftermath by the Rwandan Patriotic Front The global media landscape has been transformed since Rwanda We are now saturated with social media generated as often as not by non journalists Mobile phones are everywhere And in many quarters the traditional news media business model continues to recede Against that backdrop it is more important than ever to examine the nexus between media and mass atrocity The book includes an extensive section on the echoes of Rwanda which looks at the cases of Darfur the Central African Republic Myanmar and South Sudan while the impact of social media as a new actor is examined through chapters on social media use by the Islamic State and in Syria and in other contexts across the developing world It also looks at the aftermath of the genocide the shifting narrative of the genocide itself the evolving debate over the role and impact of hate media in Rwanda the challenge of digitizing archival records of the genocide and the fostering of free and independent media in atrocity s wake The volume also probes how journalists themselves confront mass atrocity and examines the preventive function of media through the use of advanced digital technology as well as radio programming in the Lake Chad Basin and the Democratic Republic of Congo Media and Mass Atrocity questions what the lessons of Rwanda mean now in an age of communications so dramatically influenced by social media and the relative decline of traditional news media

Environmental Hazards and Disasters Bimal Kanti Paul,2011-11-01 Environmental Hazards and Disasters Contexts Perspectives and Management focuses on manifested threats to humans and their welfare as a result of natural disasters The book uses an integrative approach to address socio cultural political and physical components of the disaster process Human and social vulnerability as well as risk to environmental hazards are explored within the comprehensive context of diverse natural hazards and disasters In addition to scientific explanations of disastrous occurrences people and governments of

hazard prone countries often have their own interpretations for why natural disasters occur In such interpretations they often either blame others in order to conceal their inability to protect themselves or they blame themselves attributing the events to either real or imagined misdeeds The book contains a chapter devoted to the neglected topic of such reactions and explanations Includes chapters on key topics such as the application of GIS in hazard studies resiliency disasters and poverty climate change and sustainability and development This book is designed as a primary text for an interdisciplinary course on hazards for upper level undergraduate and Graduate students Although not targeted for an introductory hazards course students in such a course may find it very useful as well Additionally emergency managers planners and both public and private organizations involved in disaster response and mitigation could benefit from this book along with hazard researchers It not only includes traditional and popular hazard topics e g disaster cycles disaster relief and risk and vulnerability it also includes neglected topics such as the positive impacts of disasters disaster myths and different accounts of disasters and disasters and gender

Disaster Recovery Through the Lens of Justice Alessandra Jerolleman, 2019-01-25 There has been increased attention to the topics of disaster recovery and disaster resilience over the past several years particularly as catastrophic events such as Hurricane Katrina and Superstorm Sandy have brought to light the increasing vulnerability of so many communities This manuscript brings together existing research along with policy analysis in order to look at disaster recovery through the lens of justice This includes understanding the mechanisms through which vulnerability is exacerbated and the extent to which the regulations and agency cultures drive this outcome While existing analyses have sought to understand the particular characteristics of both resilient and vulnerable communities there have been few attempts to understand the systemic inequities and injustice that is built into United States disaster policies programs and legislation This manuscript thus begins from the understanding that social and economic structures including land use policies and historic practices such as redlining have concentrated hazard risk into vulnerable zones whose inhabitants do not benefit from the very policies that create and increase their risk
