Resources in Education ,2001 **Wake** Karey Alison Harwood,2024-05-17 The Wake County Public School System was once described as a beacon of hope for American school districts It was both academically successful and successfully integrated It accomplished these goals through the hard work of teachers and administrators and through a student assignment policy that made sure no school in the countywide district became a high poverty school Although most students attended their closest school the diversity policy modified where some students were assigned to make sure no school had more than 40% of its students qualifying for free or reduced price lunch or more than 25% performing below grade level When the school board election of 2009 swept into office a majority who favored neighborhood schools the diversity policy that had governed student assignment for years was eliminated Wake Why the Battle Over Diverse Public Schools Still Matters tells the story of the aftermath of that election including the fierce public debate that ensued during school board meetings and in the pages of the local newspaper and the groundswell of community support that voted in a pro diversity school board in 2011 What was at stake in those years was the fundamental direction of the largest school district in North Carolina and the 14th largest in the U S Would it maintain a commitment to diverse schools and if so how would it balance that commitment with various competing interests and demands Through hundreds of published opinion articles and several in depth interviews with community leaders Wake examines the substance of that debate and explores the community s vision for public education Wake also explores the importance of knowing the history of a place including the history of school segregation Wake County s example still resonates and the battle over diverse public schools still matters because owning responsibility for the problem of segregated schools or not will shape the direction of America s future **Women**

The High School Journal ,2001 *Physical Activity, Self-Regulation, and Executive Control Across the Lifespan* Sean

P. Mullen, Peter Hall, 2016-02-05 There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise induced cognitive and brain health enhancement a list that ranges from molecular changes to systemic changes in executive control and neural connectivity A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior In accordance with this view physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control Executive control is a limited resource and the aging process depletes this resource People who regularly exercise are said to have higher self regulatory control planning goal shielding and impulse control than irregular exercisers The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures Indeed a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity However little is known about the neural correlates of physical activity adherence or sedentary behavior with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors No research has focused on the brain networks responsible for the self regulation of physical activity which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors Interdisciplinary investigations are needed to explain the extent to which physical activity self regulation and self regulatory failure is dependent upon or under the influence of executive control processes and brain networks Understanding the degree to which self regulatory resources may be enhanced restored and trained will have enormous implications for basic science and applied fields It is also of great import to understand whether or not physical activity self regulation is a domain specific behavior associated with specific brain networks or to determine the extent to which regulatory network sharing occurs The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior self regulation and executive control For this Research Topic we therefore solicit reviews original research articles and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior self regulatory strategies cognitive performance and brain structure and function While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations and methodological innovations This Frontiers Research Topic will carve out new directions for the fields of exercise cognitive and social neurosciences We hope you will consider submitting your work
