

6. A woman is in active labor with her first child when her membranes rupture. She states a concern to the nurse that she is afraid of having a "dry labor." Which of the following responses by the nurse would be MOST appropriate?
1. "The amniotic fluid provides only minimal lubrication for the labor process."
 2. "The amniotic sac may impede the progress of labor and is often ruptured artificially."
 3. "Labor is only slightly more difficult with early rupture of the amniotic sac."
 4. "Because there is limited amniotic fluid, additional fluids will be supplied."

Strategy: "MOST" indicates there may be more than one answer that you like.

- (1) amniotic fluid ruptures late, allows freedom of movement for musculoskeletal development, facilitates symmetrical growth, maintains constant body temperature, is a source of oral fluids, and reflects cordles
 - (2) correct – sometimes done to assist or induce labor
 - (3) does not make labor more difficult
 - (4) no additional fluids will be supplied
7. The nurse is performing an ice massage for a client in chronic pain. The nurse is MOST concerned if which of the following is observed?
1. Redness or inflammation of the tissue.
 2. Swelling or grating of the tissue.
 3. The client states that she feels a burning and tingling sensation in the area.
 4. The client states that she feels a numbness and a cold sensation in the area.

Strategy: "MOST concerned" indicates a complication.

- (1) indicates inflammation
 - (2) correct – site should be observed every five minutes for signs of tissue intolerance, including swelling, reddening, or grating
 - (3) usually indicates ischemia or circulatory impairment
 - (4) expected outcome of numbness, which would lead to decreased pain perception
8. The nurse is caring for a client with a complete heart block. The nurse should question which of the following orders?
1. Administer fentanyl (Hydromorphone) 50 mcg IV push for POCs in excess of six per minute.
 2. Administer atropine sulfate (Atropine) 1 mg IV for symptomatic bradycardia.
 3. Anticipate withholding the client for a temporary pacemaker if the pulse continues to decrease.
 4. Give 10 cc of 1:1,000 solution of epinephrine (Adrenaline) or 500 cc D5W for sustained bradycardia below 50.

Strategy: All answers are implementation. Determine the outcome of each answer. Is it desired?

- (1) correct – in complete heart block, the AV node blocks all impulses from the SA node so the atria and ventricles beat independently. Because fentanyl suppresses ventricular irritability, it may diminish the existing ventricular irregularities. cardiac dysrhythmias are contraindicated in the presence of complete heart block.
- (2) appropriate treatment
- (3) appropriate treatment
- (4) appropriate treatment
