How Earth is in the Universe

distance = wave speed \times time

wave speed = frequency \times wavelength

Electromotive Energy

energy transferred = power \times time

power = voltage \times current

efficiency = $\frac{\text{energy actually transferred}}{\text{total energy supplied}} \times 100\%$

Expanding Motion

speed = $\frac{\text{distance travelled}}{\text{time taken}}$

acceleration = $\frac{\text{change in velocity}}{\text{time taken}}$

momentum = mass \times velocity

change of momentum = resultant force \times time for which it acts

work done by a force = force \times distance moved in the direction of the force

amount of energy transferred = work done

change in gravitational potential energy = weight \times vertical height difference

kinetic energy = $\frac{1}{2}mv^2$ = mass \times (velocity)²

Electric Circuits

power = voltage \times current

resistance = $\frac{\text{voltage}}{\text{current}}$

$\frac{\text{voltage across primary coil}}{\text{voltage across secondary coil}} = \frac{\text{number of turns in primary coil}}{\text{number of turns in secondary coil}}$

Radioactive Materials

charge = mass \times (speed of light \times 300,000,000)

Computer Algebra Systems Michael J. Wester,1999-07-16 This thorough overview of the major computer algebra
symbolic mathematical systems compares and contrasts their strengths and weaknesses and gives tutorial information for
using these systems in various ways Compares different packages quantitatively using standard test suites Ideal for assessing
the most appropriate package for a particular user or application Examines the performance and future developments from a
user s and developer s viewpoint Internationally recognized specialists overview both the general and special purpose
systems and discuss issues such as denesting nested roots complex number calculations efficiently computing special
polynomials solving single equations and systems of polynomial equations computing limits multiple integration solving
ordinary differential and nonlinear evolution equations code generation evaluation and computer algebra in education The
historical origins computer algebra resources and equivalents for many common operations in seven major packages are also
covered By providing such a comprehensive survey the experienced user is able to make an informed decision on which
system s he or she might like to use It also allows a user new to computer algebra to form an idea of where to begin Since
each system looked at in this book uses a different language many examples are included to aid the user in adapting to these
language differences These examples can be used as a guide to using the various systems once one understands the basic
principles of one CAS The book also includes contributions which look at the broad issues of the needs of various users and
future developments both from the user s and the developer s viewpoint The author is a leading figure in the development
and analysis of mathematical software and is well known through the Wester test suite of problems which provide a bench
mark for measuring the performance of mathematical software systems The book will help develop our range of titles for
applied mathematicians The book will provide a unique fully up to date and independent assessment of particular systems and
will be of interest to users and purchasers of CAS s **The Classical Review** ,1984
