By using the above model, a computerized selection index can be constructed. However, one major problem for practical application of this model is the determination of the weight coefficients. In this study, the weight coefficients were determined by using the method of principal component analysis. The results of the principal component analysis are shown in Table 2. The first principal component (PC1) explained 54.1% of the total variance, and the second principal component (PC2) explained 28.1% of the total variance. The third principal component (PC3) explained 10.2% of the total variance. The fourth principal component (PC4) explained 4.6% of the total variance.
