

Research on the significance and effective path of strengthening middle school students' labor education in the new era

Yun Liang

Abstract: Labor, as a unique activity of human beings, is an essential characteristic that distinguishes humans from animals, and is also the basis for the survival and development of human society. Labor is the origin of human beings, but also the source of education. It is for this reason that labor education has naturally become the theme of education. On March 20, 2020, the Central Committee of the Communist Party of China and the State Council issued the "Opinions on Comprehensively Strengthening Labor Education in Universities, Middle Schools, and Primary Schools in the New Era" (hereinafter referred to as the "Opinions"). On July 11th of the same year, the Ministry of Education issued the "Guidelines for Labor Education in Universities, Middle Schools, and Primary Schools (for Trial Implementation)" (hereinafter referred to as the "Guidelines"), which systematically elaborated the significance, guiding ideology, and basic principles of strengthening labor education in the new era, clarified the overall requirements, system construction, support, organization, and implementation of labor education, and provided top-level design and action guidance for the comprehensive promotion of labor education in universities, middle schools, and primary schools. Labor education is an important component of quality education, and education without labor is one-sided. This article intends to explore the significance and effective path of strengthening labor education for middle school students based on the current situation of labor literacy among middle school students, with a view to enriching the research on labor education.

Keywords: New era; Middle school students; Labor education.

1. The current situation of middle school students' labor literacy

The Marxist view of labor believes that labor creates the world, labor creates history, and labor creates human beings themselves. Labor is the essential feature and mode of existence of human beings, and is an important way to achieve the comprehensive development of human beings. Labor has played an important role in promoting the progress of human civilization and social development. Marxist political economics emphasizes the theory of labor value and advocates socialist economic principles such as distribution according to work. In Marxist educational thought, cultivating people who develop comprehensively in physical and mental abilities, and "combining education with productive labor" have always been important indicators of socialist educational practice. In China's education policies and related education policies, labor education has always been highly valued. It can be said that labor education is the need of socialist construction, and the emphasis on labor education is one of the fundamental characteristics of socialist education. For a long time, various regions and schools have adhered to the combination of education and productive labor, and have achieved certain results in practical education.

However, with the establishment of a market economic system, the continuous advancement of industrialization and urbanization, the implementation of population and family planning policies, and other factors, society's understanding of labor has constantly changed. In addition, under the baton of the high school entrance examination, schools have placed a one-sided emphasis on intellectual education development, all of which have a subtle impact on middle school students' understanding of labor:

(1) The understanding of the concept of labor is relatively narrow. According to field research, the most intuitive manifestation of labor cognition among most middle school students is limited to narrow concepts. The traditional concepts represented by personal care and household work are deeply rooted in people's hearts, while little is known about social welfare, productive labor, and social practice.

(2) The attitude towards labor is generally relatively positive. Most middle school students are relatively active in participating in household work, school labor, social labor, and various social practices, while only a few holds an aversive attitude towards labor.

(3) Lack of interest in labor to support. Due to the lack of a comprehensive outlook on labor among students, they still remain stuck in the narrow sense of traditional "labor" and "labor is the most glorious" value judgments. They lack a fundamental understanding of labor and unilaterally believe that labor affects learning, is useless, and wastes time, making it difficult to generate real interest.

(4) The degree of emotional identification with labor is relatively low. However, through interviews and surveys, it is found that students' emotional identification with labor is not high and needs to be improved.

(5) There are relatively few labor opportunities to participate in off-campus practice. The Ministry of Education, the Central Committee of the Communist Youth League, and the National Committee for Children's Work in 2015 pointed out in the "Opinions on Strengthening Labor Education for Primary and Secondary School Students": "To organize off-campus labor, it is necessary to incorporate off-campus labor into the school's educational work plan. Each primary, middle, and high school segment must arrange a certain amount of time for labor practices such as agricultural production,
