The Effect of Self-Esteem on Student Achievement

Serdar Körük

15.1 Introduction

Self-esteem is defined as the set of positive or negative evaluations of individuals about their own selves (Rosenberg 1965). Self and self-esteem constitute two different dimensions of personality. The self represents the cognitive part of the personality, whereas self-esteem represents the affective and psychologic dimension. The personality traits of the individuals, their physical features, abilities, skills, social relations, feelings and their ideas about their academic or professional performance and the satisfaction they feel as a result of these ideas, are included in the concept of self-esteem (Yılmaz 2000; İzgiç et al. 2001). A high level of perceived satisfaction indicates that the individual has high self-esteem, whereas a low level of satisfaction indicates low self-esteem. Özkan (1994) defined people with high self-esteem as individuals who are successful in academic and professional areas, who can handle stress, who can establish social and close relations and who have a high level of vitality and enjoyment. At the same time, he defined people with low self-esteem as individuals who have a low level of vitality and enjoyment, who are not self-confident, who feel shame and feelings of worthlessness and who feel inadequate in terms of successes and skills.

The formation of self-image in individuals starts in their babyhood and early childhood periods through the verbal and non-verbal signals that they receive from their parents who are the primary objects of connection (Demiriz and Öğretir 2007). Towards the early childhood period, when the cognitive level is developed, the baby starts to create his or her self-esteem by evaluating his or her physical properties, abilities, strengths and weaknesses. Nine months old babies start to realize that they are mentally different from each other, and they develop their verbal self when they are eighteen months old. The progress of infants' cognitive

Extending Self-Esteem Theory and Research Timothy J. Owens, Sheldon Stryker, Norman Goodman, 2006-11-02 Self esteem is an academic and popular phenomenon vigorously researched and debated sometimes imbued with magical qualities other times vilified as the bane of the West s preoccupation with self Though thousands of articles have been devoted to the topic and bookshops work to feed the public s appetite for advice on revealing enhancing and maintaining self esteem conflicting claims and findings have placed the field in disarray In a very real sense self esteem is a victim of its own popularity This book seeks to add clarity to a concept earlier examined by such notable self theorists as Morris Rosenberg but eminently worthy of re examination and extension We do this by asking some leading thinkers on self esteem theory measurement and application to assess what we know about self esteem and link it to important aspects of society and the human experience

The Social Importance of Self-Esteem Andrew Mecca, Neil J. Smelser, John Vasconcellos, 1989-08-15 Is the well being of a society dependent on the well being of its citizenry Does individual self esteem play a causal role in chronic social problems such as child abuse school drop out rates teenage pregnancy alcohol and drug abuse welfare dependency In an attempt to answer these questions the State of California established a task force on self esteem and social responsibility in 1987 The aim of this body was to determine what connections might exist between these two factors and to suggest policy guidelines relating to the welfare of

Californians and to the expenditure of public resources The ten essays in this volume prepared by faculty members of the University of California draw on research in the social and behavioral sciences to explore these issues They assess the substantive assertions and research findings in the field and make careful evaluations of their reliability and validity In many cases strong connections between self esteem and problematic behavior are established in others the connections are weak and in some the causal relationship is as yet imperfectly understood One of the conclusions of the book is that research on these issues needs to be improved particularly in the areas of comparative and longitudinal studies Guidelines for future research are suggested and some points of policy direction are elaborated These essays may indeed promote additional research for the premise that social stability and welfare are largely dependent on the psychological state of a people poses a challenging and provocative counter emphasis to the assumption that social institutions are the primary determinants of individual welfare Self-Esteem and Positive Psychology, 4th Edition Christopher J.
