Writing a Biomedical Research Paper Brian Budgell, 2008-12-05 All of us in biomedicine understand the urgency of getting experimental results into print as quickly as possible Yet this critical step in the cascade from research conception to publication receives almost no attention in our formal training It is as if we have been put to sea without a compass Our collective failure to achieve widespread literacy in our own language Biomedical Language seriously impedes the important process of disseminating new biomedical knowledge and thereby improving the human condition It is also a significant personal concern for researchers and clinicians in the highly competitive publish or perish environment of contemporary academia Of course if we are clever or lucky enough to come up with that Nobel Prize winning discovery great science will carry the day and we are likely to get published even if our writing is fairly horrid But most of us who publish are bread and butter scientists We compete for space in journals which may only accept 10% or 20% of the submissions that they receive each year For us convincing engaging writing will make the difference between being published or rejected or at least it will

make the difference between being published on first submission or having to go through a number of revisions or journals. None of this is to propose that good writing can make a silk purse out of a sow's ear. Scientific content is the sine qua non of biomedical writing.

Essentials of Scientific Writing Joseph Mugah, 2016-12-13. *Essentials of Scientific Writing: How to Write Effective Titles and Abstracts for Research Papers and Proposals* is a belated entrant into a vast and crucially important area with scarce reference materials. This scarcity manifested itself as I searched what I had expected would be useful source materials for the present book. I skimmed through many textbooks on scientific writing and editing articles on the Internet and notes from courses on scientific writing. They all turned out to be manifestly wanting in both depth and scope. None extended beyond two pages and most were hardly a page long so they were largely useless for my purposes. To the authors' knowledge, few published books treat the subjects of Titles and Abstracts in the kind of detail presented in this book. Accordingly, in developing the book, the author hoped to fill a void in the crucial area of facilitating sharing of knowledge and information from research work. It is my hope that everyone writing scientific work will endeavor to find space for the book on their shelves and will place it within arms length whenever they are writing or editing the title or abstract.

The Research Paper Audrey J. Roth, 1995. This work stresses the process of preparing a research paper: searching for information in both print and nonprint sources; synthesizing what is learned with original ideas and interpretations; organizing the whole; and then writing and revising.

Handbook for Health Care Research Robert Chatburn, 2011. *Handbook for Health Care Research*, Second Edition, provides step by step guidelines for conducting and analyzing research, teaching students and practitioners how to implement research protocols and evaluate the results even if they lack experience or formal training in the research process. Features include easy reference of basic research procedures and definitions as well as information on how to determine the proper test to use and how to format information for computer entry. Statistical procedures and published findings are illustrated with real world examples from health care practice in this user friendly resource. Readers will also learn the research basics necessary to understand scientific articles in medical journals and discover how to write abstracts that will pass peer review. *Handbook for Health Care Research*, Second Edition, is an excellent tool to help students and practitioners become educated consumers of research and apply the principles of scientific analysis to provide a sound basis for patient care.

Book Jacket: Psychology Research Methods Wendy Heath, 2018-01-11. Comprehensive, engaging and punctuated with humor, this undergraduate textbook provides an interesting introduction to research methodology. *Psychology Research Methods* allows students to become familiar with the material through examples of research relevant to their lives. The textbook covers every major research approach in psychology. Students will learn how to evaluate and conduct the different varieties of descriptive research and experimental research. They will learn all steps of the research process from developing a research idea to writing about and presenting what they did. Each chapter contains suggestions for journal article readings and activities relevant to the topics covered. The textbook also includes a chapter on how to conduct research.

Writing Scientific Research Articles Margaret Cargill, Patrick D. T. O'Connor, 2011-09-13 Margaret Cargill s background as a linguist and research

communications educator and Patrick O Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling well documented clear narratives that convey their work honestly and in proper context they have succeeded admirably.

Veterinary Pathology July 2009 The book is clearly written has a logical step by step structure is easy to read and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing.

Aquaculture International April 2009 **Writing Scientific Research Articles Strategy and Steps** guides authors in how to write as well as what to write to improve their chances of having their articles accepted for publication in international peer reviewed journals. The book is designed for scientists who use English as a first or an additional language for research students and those who teach them paper writing skills and for early career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well written example papers. Strategies are presented for responding to referee comments as well as ideas for developing discipline specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at www.writeresearch.com.au for more information.
