

The Empowerment Approach

The empowerment framework has been the subject of scholarly debate for several decades, creating confusion between academics and practitioners. The lack of a clear definition for this concept and unresearched implementation techniques have led to unsuccessful strategies utilized in the organizational environment (Hughes et al., 2021). Nevertheless, employee empowerment has been thoroughly clarified and studied in the current age. As such, empowerment is divided into delegation and development, two crucial aspects of empowering the workforce to make informed and professional decisions (Hughes et al., 2021). However, the two psychological factors of empowerment must also be assessed to grasp the nature of this concept fully.

Delegation and Development

Transferring responsibility from the superior officer to the subordinate is vital for creating an atmosphere that promotes empowerment. As such, each worker must possess the capability to make a relevant decision in a specific environment (Monje Amor et al., 2021). Given that many subordinate workers are more closely involved in the organizational processes and are thus more likely to be well-informed about the ongoing issues, their capability to resolve a particular problem should not be undermined (Monje Amor et al., 2021). Thus, each superior officer should properly delegate both leadership and responsibility roles, ensuring that their subordinates can solve an emerging problem if needed.

The second component of empowerment, development, is also imperative for facilitating effective decision-making. To ensure that the employees are empowered to complete their assignments and propose solutions, the executives must provide them with the relevant resources that can help the workers enhance their skills (Panda et al., 2022). The lack of professional competencies often leads to poor decision-making and loss of engagement, which, in turn, negatively affects the workers' empowerment levels.

Psychological Components

In addition, two psychological components to empowerment have been identified. The macro-level component is divided into motivation, learning, and stress, which can tremendously enhance the employees' performance if correctly implemented (Hughes et al., 2021). On the other hand, the micro-factors are self-determination, meaning, competence, and influence, which allow establishing whether the necessary empowerment levels have been achieved (Hughes et al., 2021). Overall, each of the discussed psychological aspects plays a crucial role in employee empowerment.
