Abstract

Researchers, academic authors, and journal editors vary in opinion as to whether to write in the first person for formal publication. This review examines guidance from the most influential style guides in three major categories of academic disciplines: social sciences, arts and humanities, and science and engineering. Conclusions are that, in general, writing in the first person with active voice is preferred, resulting in more direct and understandable text; that for any specific instance, the decision of the academic advisor or publication editor is the "correct" approach; and that, when the Publication Manual of the American Psychological Association is the guiding style authority, use of first person is specifically prescribed for statements of author action.

Keywords: first person, third person, active voice, passive voice, professional writing

1. INTRODUCTION

Some academic authors seem to avoid use of the first person in formal writing, presumably in an attempt to have research articles maintain an objective tone. At the same time, it is not uncommon to read articles in a wide range of professional journals in which the authors use the first person. Some of those authors who only write in the third person may think that style guides recommend using only third person for formal research writing. However, in several commonly used style guides, that is not the case. The purpose of this paper is to review the position on use of the first person in academic writing in style guidelines for three major categories of academic discipline: social

sciences, arts and humanities, and science and engineering. The style manuals of three professional organizations, the American Psychological Association (APA), the Modern Language Association (MLA), and the Institute of Electrical and Electronics Engineers (IEEE), are the dominant authors' reference in each broad academic category, respectively: the APA guide for the social sciences, the MLA guide for the arts and humanities, the IEEE guide for science, engineering and technology.

2. Social Sciences: The APA

Used broadly across the social sciences, the sixth edition of the Publication Manual of the American Psychological Association (APA, 2010)
