critically acclaimed first edition of this book Mainstone offered a brilliant and highly original account of the structural developments that have made possible the achievements of architects and bridge builders throughout history In this extensively revised and expanded new edition now available in paperback new insights and a full coverage of recent developments in both design and construction are incorporated The book identifies features that distinguish the forms built by man from those shaped by nature and discusses the physical and other constraints on the choices that can be made It then looks in turn at all the elementary forms arches domes beams slabs and the like which combine into the more complex forms of complete structures and at the different classes of the complete forms themselves The development of each form is traced chronologically but with an emphasis less on the chronology than on the problems that designers have continually faced in trying to serve new ends with limited means or to serve old ones in new ways The book concludes with a chapter on the processes of design showing how the designer's freedom of choice has been widened by a growing understanding of structural behaviour **Manual of precast concrete construction** Ing Tihamer Koncz, 1970 Construction Matters

Stefan Holzer, Silke Langenberg, Clemens Knobling, Orkun Kasap, 2025-03-04 Construction History Construction Heritage Recent Construction Historiography Industrialization Engineering Sciences Building Materials Building Actors Construction History is still a fairly new and small but quickly evolving field The current trends in Construction History are well reflected in the papers of the present conference Construction History has strong roots in the historiography of the 19th century and the evolution of industrialization but the focus of our research field has meanwhile shifted notably to include more recent and also more distant histories as well This is reflected in these conference proceedings where 65 out of 148 contributed papers deal with the built heritage or building actors of the 20th or 21st century The conference also mirrors the wide spectrum of

documentary and analytical approaches comprised within the discipline of Construction History Papers dealing with the technical and functional analysis of specific buildings or building types are complemented by other studies focusing on the lives and formation of building actors from laborers to architects and engineers from economical aspects to social and political implications on legal aspects and the strong ties between the history of construction and the history of engineering sciences The conference integrates perfectly into the daily work at the Institute for Preservation and Construction History at ETH Zurich Its two chairs the Chair for Building Archaeology and Construction History and the Chair for Construction Heritage and Preservation endeavor to cover the entire field and to bridge the gaps between the different approaches methodologies and disciplines between various centuries as well as technologies learning together and from each other The proceedings of 8ICCH give a representative picture of the state of the art in the field and will serve as a reference point for future studies Concrete Industries Yearbook ,1979 **Sources of Construction Information: Books** Jules B.
