FEASIBILITY STUDY

Situation in which the Project Exists: This proposal is for a data communication network to serve the Maryland public education system. The Maryland legislature recently approved funding sufficient to pay for the development of this proposal. Pending proposal acceptance by the Maryland State Public Education Office of Technology (a department within the state Office of Education), funding will be sought to implement the proposal.

Network Scope: The proposed network is designed to serve the state Office of Education and two of its school district offices. The state office, located in Kensington, contains five departments to be served by this network. Each district office contains four departments to be served. The North School District is located in Ricksville, 25 miles from the state office. The South School District is located in Albantown, about 40 miles from the state office. Note that this network does not serve instructional needs of students; other resources have been allocated for that purpose. This network is for administrative purposes and is specifically designed to be independent of student computing facilities.

Objectives of the Network: The network is designed to achieve several specific business/operational objectives:

1. ***Secure Service:*** The main objective of this network is to provide secure administrative computing service to the State Office and two districts. It is designed to be functionally and physically isolated from access by people not employed by the Maryland public education system so as to minimize the risk of unauthorized use.
2. ***Integration and Update:*** Presently there are many LANs in the Maryland public education system, but much of the equipment is out of date, many of the LANs are incompatible with each other, and not connected in a system-wide network. This proposal describes a WAN that integrates and updates these LANs to support productive collaboration across the system.
3. ***Versatile Information Processing:*** The network will enable users to retrieve, process, and store ASCII and non-ASCII text, still graphics, audio, and video from any connected computer.
4. ***Collaboration:*** The network will combine the power and capabilities of diverse equipment across the state to provide a collaborative medium that helps users combine their skills regardless of their physical location. A network for this educational community will enable people to share information and ideas easily so they can work more efficiently and productively.
5. ***Scalability:*** The design is scalable so that more district offices can be added as funding becomes available without having to redo the installed network.

Design of Water Quality Monitoring Systems Robert C. Ward, Jim C. Loftis, Graham B. McBride, 1991-01-16 Design of Water Quality Monitoring Systems Design of Water Quality Monitoring Systems presents a state of the art approach to designing a water quality monitoring system that gets consistently valid results It seeks to provide a strong scientific basis for monitoring that will enable readers to establish cost effective environmental programs The book begins by reviewing the evolution of water quality monitoring as an information system and then defines water

quality monitoring as a system following the flow of information through six major components sample collection laboratory analysis data handling data analysis reporting and information utilization The importance of statistics in obtaining useful information is discussed next followed by the presentation of an overall approach to designing a total water quality information system This sets the stage for a thorough examination of the quantification of information expectations data analysis network design and the writing of the final design report Several case studies describe the efforts of various organizations and individuals to design water quality monitoring systems using many of the concepts discussed here A helpful summary and final system design checklist are also provided Design of Water Quality Monitoring Systems will be an essential working tool for a broad range of managers environmental scientists chemists toxicologists regulators and public officials involved in monitoring water quality The volume will also be of great interest to professionals in government industry and academia concerned with establishing sound environmental programs
