Congress. Senate. Committee on Education and Labor, 1936 **Resources in Education**, 1981 Multigrid Methods for Process Simulation Wolfgang Joppich, Slobodan Mijalkovic, 2012-12-06 It was about 1985 when both of the authors started their work using multigrid methods for process simulation problems This happened independent from each other with a completely different background and different intentions in mind At this time some important monographs appeared or have been in preparation There are the three classical ones from our point of view the so called 1984 Guide 12J by Brandt the Multi Grid Methods and Applications 49J by Hackbusch and the so called Fundamentals 132J by Stiiben and Trottenberg Stiiben and Trottenberg in 132J state a delayed acceptance resentments with respect to multigrid algorithms They complain Nevertheless even today's situation is still unsatisfactory in several respects If this is true for the development of standard methods it applies all the more to the area of really difficult complex applications In spite of all the above mentioned publications and without ignoring important theoretical and practical improvements of multigrid this situation has not yet changed dramatically This statement is made under the condition that a numerical principle like multigrid is accepted if there exist professional programs for research and production purposes Professional in this context stands for solving complex technical problems in an industrial environment by a large community of users Such a use demands not only for fast solution methods but also requires a high robustness with respect to the physical parameters of the problem

From Biomass to Advanced Bio-Based Chemicals & Materials: A Multidisciplinary Perspective Gabriel Paës, Caroline Rémond, Xavier Coqueret, Florent Allais, Thomas James Farmer, Warwick Douglas Raverty, 2020-04-01 Lignocellulose is the only renewable carbon source that can help replace oil based chemicals and materials in the process fighting global warming However because of its chemical and structural complexity lignocellulose transformation into advanced products requires a better understanding of its composition and of its architecture at different scales as well as a combination of physical biological and chemical processes in order to render this transformation efficient and economically

competitive Tremendous efforts continue to be made toward the production of ethanol as a biofuel from various lignocellulosic feedstocks Furthermore recent successes have been achieved in extracting fibers to prepare composite materials that can compete with plastic fabrics Importantly lignocellulose chemistry can bring to the market original and complex chemicals that can lead to new applications in particular when exploiting aromatic molecules or oligosaccharides from lignocellulose to produce solvents surfactants plasticizers functional additives for food feed cosmetics drugs monomers and polymers In addition to this broad range of molecular products fibers and particles fractionated from the lignocellulosic biomass are increasingly used to elaborate bio based composite materials
