(Student textbook pages 396–9)

1. absorption, digestion, respiration, biosynthesis, excretion, egestion, secretion, movement, irritability, homeostasis, and reproduction
2. c
3. Students may suggest osmosis or diffusion. Some students may also suggest active transport (endocytosis, exocytosis). All of these answers are acceptable.
4. d
5. 6CO_2 , $6\text{H}_2\text{O}$
6. A is the cell membrane, which separates the inside of the cell from the environment within the body, and controls the flow of materials into and out of the cell. B is the cytoplasm, which includes the cytosol, organelles, and other life-supporting materials. C is a mitochondrion, from which energy is released from glucose to fuel cell activities.
7. c
8. a. Both processes move molecules across the cell membrane.
b. Osmosis is the process whereby water moves through the cell membrane so that the numbers of water molecules on the inside and outside of a cell are the same. Diffusion is the movement of molecules from areas where there are higher concentrations of molecules to areas where there are lower concentrations of molecules.
Sample answer:

9. Sweating is an example of osmosis. The gas exchange in our lungs is an example of diffusion.
10. a. A sperm cell requires the most food energy, because the sperm tail moves back and forth like a whip.
b. Skin cells have the least number of mitochondria of the three types because they require the least amount of energy. Skin cell functions do not include movement, whereas muscle cells must provide energy for muscles to contract and relax.

11. c

12. In multicellular organisms, cell division is needed for tissue and organ growth, and to repair and replace cells in the organism.

Control and Dynamic Systems V35: Advances in Control Mechanics Part 2 of 2 C.T. Leonides, 2012-12-02

Advances in Control Mechanics is based on a National Science Foundation Sponsored Workshop on Control Mechanics in the control system development using analytical methods of mechanics and active control of mechanical systems. Publication of the presentations at this workshop in this Academic Press series has made it possible to expand them into a format which will facilitate the study and utilization of their significant results by working professionals and research workers on the international scene. This book comprises 13 chapters with the first focusing on recursive Lyapunov functions particularly their properties and linear systems. Succeeding chapters tackle topics such as the Lyapunov functional approach to uncertain systems governed by functional differential equations with finite time lag and stabilizing discrete control laws for Hamiltonian systems. Other chapters cover component model reduction in canonical correlation coordinates controlling a flexible plate to mimic a rigid one, the modal stability of imperfect cyclic systems and simultaneous stabilization via low order controllers. The remaining chapters discuss the use of Liapunov techniques for collision avoidance of robot arms, avoidance control of a two point mechanical system, coordination controllers for multi arm manipulators, MRAC techniques with application to robot manipulators, optimal preview controllers based upon explicit trajectory models and analysis of a robot dragline for mining. This book will be of interest to practitioners in the fields of engineering and aeronautics. **Catalogue**

Lyons, 1996-10-16 Petroleum engineering now has its own true classic handbook that reflects the profession's status as a mature major engineering discipline. Formerly titled the Practical Petroleum Engineer's Handbook by Joseph Zaba and W T Doherty, editors, this new completely updated two volume set is expanded and revised to give petroleum engineers a comprehensive source of industry standards and engineering practices. It is packed with the key practical information and data that petroleum engineers rely upon daily. The result of a fifteen year effort, this handbook covers the gamut of oil and gas engineering topics to provide a reliable source of engineering and reference information for analyzing and solving problems. It also reflects the growing role of natural gas in industrial development by integrating natural gas topics throughout both volumes. More than a dozen leading industry experts, academia and industry contributed to this two volume set to provide the best most comprehensive source of petroleum engineering information available. *European Control Conference 1993*, 1993-06-28 Proceedings of the
