Meningitis and Encephalitis are associated with high rates of mortality and neurological sequelae The differential diagnosis  
includes a wide spectrum of infectious and non infectious etiologies some requiring urgent therapy for survival The current  
management challenges in patients with meningitis and encephalitis include a low sensitivity of meningeal signs  
overutilization of unnecessary screening cranial imaging delays in diagnosis of urgent treatable causes a large proportion of  
unknown etiologies low sensitivity of current microbiological techniques especially in the setting of previous antibiotic  
therapy underutilization of available molecular diagnostic tests and empiric antibiotic therapy and hospitalization for viral
