Medico-legal Radiology William S. C. Hare, 2007 This title is directed primarily towards health care professionals outside of the United States Radiologists are sued for all sorts of reasons but particularly when diagnoses are missed and in compensation cases their reports can be critical in determining the outcome Medico Legal Radiology describes over 100 cases from the author's personal experience as an expert witness and makes suggestions for reducing risk and tailoring report writing to the legal environment The legal issues in radiological practice and medical defence The radiologist as a witness How to write a legal opinion How to write reports with possible litigation in mind Detailed discussions of cases relating to each body system

*Abdominal and Pelvic Imaging Cases* Mukesh G. Harisinghani, 2024-11-01 This book offers a practical evidence based casebook on abdominal imaging As imaging is increasingly being used for most clinical scenarios referring physicians rely on radiologists to provide evidence based interpretation for the incidental and indication related findings seen on the imaging studies While imagers are trained in identifying the findings what makes a report more clinically relevant is the accurate assessment and a more focused differential based on knowing the pertinent evidence based data that supports one diagnosis over the other or favors benign over malignant etiology Imagers typically don't have this information readily available to them to provide and make a more informed impression of the findings seen For example if a hyperdense renal lesion with attenuation of 80 HU is seen on the noncontrast stone protocol CT it is important to know what is the likelihood this lesion is worrisome and if any further investigation is needed While this information is available it is scattered and one needs to acquire synthesize and collate this from the web This casebook overcomes this void by providing this information in a simplified case based template that any reader can then quickly reference and use in their day to day work In addition template language for dictation where relevant will be provided Cases are organized around major abdominal areas including bowel genitourinary tract and pancreas Each case also includes a table of pearls and pitfalls to be learned and applied to everyday practice This is an ideal guide for residents fellows and staff from radiology as a day to day resource or board review book Given the lack of a comprehensive text this will be useful to all cadres of radiologists

Observer Performance Methods for Diagnostic Imaging

Dev P. Chakraborty, 2017-12-14 This book presents the technology evaluation methodology from the point of view of radiological physics and contrasts the purely physical evaluation of image quality with the determination of diagnostic outcome through the study of observer performance. The reader is taken through the arguments with concrete examples illustrated by code in R, an open source statistical language. Foreword by Prof Harold L Kundel, Department of Radiology, Perelman School of Medicine, University of Pennsylvania. This book will benefit individuals interested in observer performance evaluations in diagnostic medical imaging and provide additional insights to those that have worked in the field for many years. Prof Gary T Barnes, Department of Radiology, University of Alabama at Birmingham. This book provides a complete introductory overview of this growing field and its applications in medical imaging utilizing worked examples and exercises to demystify statistics for readers of any background. It includes a tutorial on the use of the open source widely used R software as well as basic statistical background before addressing localization tasks common in medical imaging. The coverage includes a discussion of study design basics and the use of the techniques in imaging system optimization, memory effects in clinical interpretations, predictions of clinical task performance, alternatives to ROC analysis, and non-medical applications. Dev P Chakraborty PhD is a clinical diagnostic imaging physicist certified by the American Board of Radiology in Diagnostic Radiological Physics and Medical Nuclear Physics. He has held faculty positions at the University of Alabama at Birmingham, University of Pennsylvania, and most recently at the University of Pittsburgh. [Brain Imaging](#)
