Fire Hazard Analysis Techniques

By David W. Rye
David W. Rye, P.E., is a senior fire protection engineer at the University of Maryland System.

Fire hazard analysis is a systematic process used to identify, evaluate, and control fire hazards. It is a critical component of fire protection engineering, providing a structured approach to understanding the potential consequences of fire in a building or facility. This process involves a detailed examination of the building's design, construction, and occupancy, as well as the fire's origin and spread. The goal is to identify potential fire hazards and implement measures to prevent or mitigate their effects.
