treatment of fossil hydrocarbons covering the source materials biosources metamorphic histories geochemistry classification and molecular structure It discusses the use of fossil hydrocarbons as a viable energy source in our future detailing the preparation processing and conversion technologies as well as discussing the environmental issues that arise from production processing and use of various fossil hydrocarbons Approaches various fossil hydrocarbons as chemically related entities thus dispelling the unwarranted distinctions between crude oils and coal Explains how heavy fossil hydrocarbons can be processed by much the same methods as crude oils for good economic and environmental purpose Illustrates how bitumens oil shales and coals are convertible into synthetic natural gas and oils Shows a path for reasonable energy self sufficiency through conversion of heavy hydrocarbons into synthetic natural gas and oils Augments each chapter with end of chapter notes and a detailed bibliography Provides more than 200 useful tables schematics and figures The Journal of Industrial and Engineering Chemistry ,1918
