Standard Setting in Education Sigrid Blömeke, Jan-Eric Gustafsson, 2017-02-27 This book summarizes the international evidence on methodological issues in standard setting in education. By critically discussing the standard setting practices implemented in the Nordic countries and by presenting new methodological approaches it offers fresh perspectives on the current research. Standard setting targets crucial societal objectives by defining educational benchmarks at different achievement levels and provides feedback to policy makers, schools and teachers about the strengths and weaknesses of a school system. Given that the consequences of standard setting can be dramatic, the quality of standard setting is a prime concern. If it fails, repercussions can be expected in terms of arbitrary evaluations of educational policy, wrong turns in school or teacher development or misplacement of individual students. Standard setting therefore needs to be accurate, reliable, valid, useful and defensible. However, specific evidence on the benefits and limits of different approaches to standard setting is rare and scattered, and there is a particular lack with respect to standard setting in the Nordic countries where the number of national tests is increasing and there are concerns about the time and effort spent on testing at schools without feedback being provided. Addressing this gap, the book offers a discussion on standard setting by respected experts as well as profound and innovative insights into fundamental aspects of standard setting, including conclusions for future methodological and policy related research.

Are South Africans Free? Lawrence Hamilton, 2014-04-10 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com Despite South Africa's successful transition to democracy and lauded constitution political freedom for the majority of South Africans remains elusive The poor and unemployed majority are poorly represented and lack power and thus freedom Under these conditions the freedom of the privileged minority is also seriously impaired due to the costs of maintaining their relative security and well being Lawrence Hamilton is an internationally known political theorist who has spent ten years teaching in South African universities In this unique book he brings ideas political and philosophical to the fore to understand a contemporary political conundrum He outlines the persistent unresolved problems characterizing contemporary South Africa poverty and quality of life statistics that are appalling for a middle income country levels of inequality that make South Africa one of the most unequal places in the world skewed economic and political representation that reproduces elites rather than generating opportunities for all and an electoral system that implements the idea of proportional representation so literally that it undermines meaningful representation Are South Africans Free aims not only to explain the current state of South Africa but to provide positive new directions and suggestions for institutional change Hamilton argues that freedom as power in South Africa does not depend on good will charity or duty and it goes beyond the complete realization of the political and civil liberties currently safeguarded in its constitution Such change will depend on courageous leadership active citizenship new forms of representation and a macroeconomic policy that offers radical redistribution of actual and potential wealth

Linking Optical and Chemical Properties of Dissolved Organic Matter in Natural Waters Christopher L. Osburn, Thomas S. Bianchi, 2017-01-17 A substantial increase in the number of studies using the optical properties absorbance and fluorescence of dissolved organic matter DOM as a proxy for its chemical properties in estuaries and the coastal and open ocean has occurred during the last decade We are making progress on finding the actual chemical compounds or phenomena responsible for DOM's optical properties Ultrahigh resolution mass spectrometry in particular has made important progress in making the key connections between optics and chemistry But serious questions remain and the last major special issue on DOM optics and chemistry occurred nearly 10 years ago Controversies remain from the non specific optical properties of DOM that are not linked to discrete sources and sometimes provide conflicting information The use of optics which is relatively easier to employ in synoptic and high resolution sampling to determine chemistry is a critical connection to make and can lead to major advances in our understanding of organic matter cycling in all aquatic ecosystems The contentions and controversies raised by our poor understanding of the linkages between optics and chemistry of DOM are bottlenecks that need to be addressed and overcome
