Perspectives On Argument 7th Edition:

Perspectives on Scientific Argumentation Myint Swe Khine, 2011-09-30 Argumentation arriving at conclusions on a topic through a process of logical reasoning that includes debate and persuasion has in recent years emerged as a central topic of discussion among science educators and researchers. There is now a firm and general belief that fostering argumentation in learning activities can develop students' critical thinking and reasoning skills and that dialogic and collaborative inquiries are key precursors to an engagement in scientific argumentation. It is also reckoned that argumentation helps students assimilate knowledge and generate complex meaning. The consensus among educators is that involving students in scientific argumentation must play a critical role in the education process itself. Recent analysis of research trends in science education indicates that argumentation is now the most prevalent research topic in the literature. This book attempts to consolidate contemporary thinking and research on the role of scientific argumentation in education. *Perspectives on Scientific Argumentation* brings together prominent scholars in the field to share the sum of their knowledge about the place of scientific argumentation in teaching and learning. Chapters explore scientific argumentation as a means of addressing and solving problems in conceptual change, reasoning, knowledge building, and the promotion of scientific literacy. Others interrogate topics such as the importance of language, discursive practice, social interactions, and culture in the classroom. The material in this book, which features intervention studies, discourse analyses, classroom-based experiments, anthropological observations, and design-based research, will inform theoretical frameworks and changing pedagogical practices as well as encourage new avenues of research. *Reconnecting Reading and Writing* Alice S. Horning, Elizabeth W. Kraemer, 2013-09-06 *Reconnecting Reading and Writing* explores the ways in which reading can and should have a strong role in the teaching of writing in college. *Reconnecting Reading and Writing* draws on broad perspectives from history and international work to show how and why reading should be reunited with writing in college and high school classrooms. It presents an overview of relevant research on reading and how it can best be used to support and enhance writing instruction.

Arguments and Arguing Thomas A. Hollihan, Kevin T. Baaske, 2015-11-17 The latest edition of *Arguments and Arguing* contains the same balance of theory and practice, breadth of coverage, current and relevant examples, and accessible writing style that made previous editions so popular in hundreds of classrooms. The authors draw from classic and recent argumentation theory and research, contextualized with well-chosen examples, to showcase a narrative style of argumentation and the values and attitudes of audiences. Readers learn how to employ both formal and informal argumentative strategies in an array of communication forums, from interpersonal interactions to academic debate to politics to business. A newly added chapter on visual argumentation and a striking color photo insert demonstrate the value and power of visual elements in the construction of arguments. The ability to argue is necessary if people are to solve problems, resolve conflicts, and evaluate alternative courses of action. While many are taught that arguing is counterproductive and arguments should be avoided,

Hollihan and Baaske illustrate that arguing is an essential and fundamental human activity Learning the art of effective argumentation entails a grasp of not only the strategies and principles of analysis and logical reasoning but also the importance of arguing in a positive and socially constructive fashion **Passion in the Pulpit** Jerry Vines, Adam B. concerned with the evaluation of natural argumentative discourse and in particular with the language in which arguments are expressed. It introduces a systematic procedure for the analysis and assessment of arguments which is designed to be a practical tool and may be considered a pseudo algorithm for argument evaluation. The first half of the book lays the theoretical groundwork with a thorough examination of both the nature of language and the nature of argument. This leads to a definition of argumentation as reasoning expressed within a procedure which itself yields the three frames of analysis used in the evaluation procedure: Process, Reasoning, and Expression. The second half begins with a detailed discussion of the concept of fallacy with particular attention on fallacies of language, their origin, and their effects. A new way of looking at fallacies emerges from these chapters, and it is that conception together with the understanding of the nature of argumentation described in earlier sections which ultimately provides the support for the Comprehensive Assessment Procedure for Natural Argumentation. The first two levels of this innovative procedure are outlined, while the third, that dealing with language and involving the development of an Informal Argument Semantics, is fully described. The use of the system and its power of analysis are illustrated through the evaluation of a variety of examples of argumentative texts.

Groundwork in the Theory of Argumentation J. Anthony Blair, 2011-10-20 J. Anthony Blair is a prominent international figure in argumentation studies. He is among the originators of informal logic, an author of textbooks on the informal logic approach to argument analysis and evaluation, and on critical thinking, and a founder and editor of the journal *Informal Logic*. Blair is widely recognized among the leaders in the field for contributing formative ideas to the argumentation literature of the last few decades. This selection of key works provides insights into the history of the field of argumentation theory and various related disciplines. It illuminates the central debates and presents core ideas in four main areas: Critical Thinking, Informal Logic, Argument Theory, and Logic, Dialectic, and Rhetoric.

Argument Dialectics: The Place of Reasons in Logic Hubert Marraud, 2025-06-12 This book is a systematic exposition of Argument Dialectics (AD). Despite its name, argument dialectics is a logical approach to argumentation theory. AD stands out among theories of argument because of three unusual features: it is reasons-based, holistic, and particularistic. This implies that AD conceives of logic as a theory of the dialectical construction of reasons, not as a theory of inferences. Consequently, contrary to other logical approaches, AD focuses on the study of interargumentative relations, especially those of opposition and weighing. The book makes an extensive use of the theory of reasons, a branch of metaethics that has been a very valuable quarry of intuitions and concepts for the elaboration of a reason-based theory of argument. The oppositions, generalism, particularism, and atomism/holism proposed by Jonathan Dancy, which play a central role in the book and in the development of AD, have been adapted from the theory of reasons, and the same can be said of the distinction between different statuses of reasons that AD associates with different kinds of counterarguments. Conceiving of the theory of argument in terms of reasons has the effect of situating the paradigm of argumentation in practical argumentation, reasoning about what to do, rather than in theoretical argumentation about what to

Approaches to Argument by Analogy Henrique Jales Ribeiro, 2014-07-09 The present volume assembles a relevant set of studies of argument by analogy which address this topic in a systematic fashion either from an essentially theoretical perspective or from the perspective of it being applied to different fields like politics linguistics literature law medicine science in general and philosophy All result from original research conducted by their authors for this publication Thus broadly speaking this is an exception which we find worthy of occupying a special place in the sphere of the bibliography on the argument by analogy In effect most of the contexts of the publications on this topic focus on specific areas for example everyday discourse science or law theory while underestimating or sometimes even ignoring other interdisciplinary scopes as is the case of literature medicine or philosophy The idiosyncrasy of this volume is that the reader and the researcher may follow the development of different theoretical outlooks on argument by analogy while measuring the scope of its greater or lesser application to the aforementioned areas as a whole
