Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. As the curve grows in height, which value gets closer to frequency distribution might also shift the same people could change the number before reaching the top.

Classroom Setup

In many cases, a frequency distribution is approximately normal. However, the frequency distribution of a variable is not always normal. The frequency distribution of a variable is not always normal. The frequency distribution of a variable is not always normal. The frequency distribution of a variable is not always normal.

d. The normal distribution is the most common distribution of data. It is a bell-shaped curve that is symmetric around the mean. The mean is the average of the data. The standard deviation is a measure of the spread of the data. The normal distribution is used to model many natural phenomena.

e. About the simulation, population of the data is the set of all data. The sample is a subset of the population. The sample mean is the average of the sample data. The sample standard deviation is a measure of the spread of the sample data.

f. What is the mean of the sample? (Mean = _____) The mean is _____

g. How many of the sample means is the population mean? _____
