Crop Systems Biology Xinyou Yin, Paul C. Struik, 2015-11-11 The sequencing of genomes has been completed for an increasing number of crop species and researchers have now succeeded in isolating and characterising many important QTLs genes High expectations from genomics however are waving back toward the recognition that crop physiology is also important for realistic improvement of crop productivity Complex processes and networks along various hierarchical levels of crop growth and development can be thoroughly understood with the help of their mathematical description modelling The further practical application of these understandings also requires quantitative predictions In order to better support design engineering and breeding for new crops and cultivars for improving agricultural production under global warming and climate change there is an increasing call for an interdisciplinary research approach which combines modern genetics and genomics traditional physiology and biochemistry and advanced bioinformatics and modelling Such an interdisciplinary approach has been practised in various research groups for many years However it does not seem to be fully covered in the format of book publications We want to initiate a book project on crop systems biology narrowing the gaps between genotypes and phenotypes and the gaps between crop modelling and genetics genomics for publication in 2013 2014 The book will be meant for those scientists and graduate students from fundamental plant biology and applied crop science who are interested in bridging the gap between these two fields We have invited a group of scientists who have very good track records in publishing excellent papers in this field or in a closely related area to contribute chapters to this new book and they have agreed to do so

Bad Bugs in the XXIst Century: Resistance Mediated by Multi-Drug Efflux Pumps in Gram-Negative Bacteria Attilio Vittorio Vargiu, Klaas Martinus Pos, Keith Poole, Hiroshi Nikaido, 2016-08-12 The discovery of antibiotics represented a key milestone in the history of medicine However with the rise of these life saving drugs came the awareness that bacteria deploy defence mechanisms to resist these antibiotics and they are good at it Today we appear at a crossroads between discovery of new potent drugs and omni resistant superbugs Moreover the misuse of antibiotics in different industries has increased the rate of resistance development by providing permanent selective pressure and subsequently enrichment of multidrug resistant pathogens As a result antimicrobial resistance has now become an urgent threat to public health worldwide <http://www.who.int/drugresistance/documents/surveillancereport/en> The development of multidrug resistance MDR in an increasing number of pathogens including Pseudomonas Acinetobacter Klebsiella Salmonella Burkholderia and other Gram negative bacteria is a most severe issue Membrane efflux pump complexes of the Resistance Nodulation cell Division RND superfamily play a key role in the development of MDR in these bacteria RND pumps together with other transporters contribute to intrinsic and acquired resistance to most if not all of the antimicrobial compounds available in our drug arsenal Given the enormous drug polyspecificity of MDR efflux pumps studies on their mechanism of action are extremely challenging and this has negatively impacted both the development of new antibiotics that are able to evade these efflux pumps as well as the design of pump inhibitors The collection of articles in this eBook published as a Research Topic in Frontiers in Microbiology section of Antimicrobials Resistance and Chemotherapy aims to update the reader about the latest advances on the structure and function of RND efflux transporters their roles in the overall multidrug resistance phenotype of Gram negative pathogens and on strategies to inhibit their activities A deeper understanding of the mechanisms by which RND efflux pumps alone or synergistically with other efflux pumps are able to limit the concentration of antimicrobial compounds inside the bacterial cell may pave the way for new more directed inhibitor and antibiotic design to ultimately overcome antimicrobial resistance by Gram negatives
