Environmental Chemistry: Chemistry Of Major Environmental Cycles Teh Fu Yen, 2005-07-08 The environment is an invaluable resource and understanding its chemistry is essential to the continued sustainability of life on earth Environmental science which builds on the foundation of chemistry seeks to remedy the present deterioration and degradation caused by humans and to create new technology that will prevent further damage This book deals comprehensively with the five essential global cycles or environspheres lithosphere minerals and energy sources atmosphere air hydrosphere water pedosphere soil and biosphere life and provides a clear overview of the crucial interaction away them It covers the chemistry of energy resources and aspects of biochemistry geochemistry and toxicological chemistry in addition to the three important areas of air water and soil in the process it links chemical principles with environmental issues With the fundamental principles presented clearly and the topics covered in a logical sequence this book can be used as a textbook of environmental chemistry for the environmental engineering or environmental science major It can also be used as a reference book for environmental professionals a , *Introduction to Chemistry and The Environment* Baldwin King, 2002-03-06 Introduction to Chemistry and the Environment is written primarily to satisfy the need for a suitable textbook for a one semester course in chemistry and the environment for non science majors It is also suitable for persons who have no knowledge of chemistry but would like to be informed about the science behind many of the environmental issues facing the general public The pedagogical approach is first to provide the basics of chemistry in a conceptual non mathematical way using material from the environment where possible Then these principles are used to discuss many of the major issues in air and water pollution The text consists of ten brief chapters The first five chapters discuss chemical principles in a succinct but scientifically sound manner The individual instructor is encouraged to elaborate on these topics as he or she sees fit The next two chapters discuss the properties of gases especially the components of air and then issues in air pollution The next two chapters focus on the properties of water and aqueous solutions followed by issues in water pollution The final brief chapter is an attempt to put everything in perspective by discussing human health and the environment Included at the end of each chapter are some suggested readings for those

who would like a more detailed discussion of the topics covered A set of discussion type questions ends each chapter Writing science for nonscientists is a difficult task However Baldwin King has used his many years as a chemical educator to produce a text which is clear and eminently readable by non chemists *Catalog of Copyright Entries.
