New Foundations in Mathematics Garret Sobczyk, 2012-10-26 The first book of its kind *New Foundations in Mathematics* The Geometric Concept of Number uses geometric algebra to present an innovative approach to elementary and advanced mathematics Geometric algebra offers a simple and robust means of expressing a wide range of ideas in mathematics physics and engineering In particular geometric algebra extends the real number system to include the concept of direction which underpins much of modern mathematics and physics Much of the material presented has been developed from undergraduate courses taught by the author over the years in linear algebra theory of numbers advanced calculus and vector calculus numerical analysis modern abstract algebra and differential geometry The principal aim of this book is to present these ideas in a freshly coherent and accessible manner *New Foundations in Mathematics* will be of interest to undergraduate and graduate students of mathematics and physics who are looking for a unified treatment of many important geometric ideas arising in these subjects at all levels The material can also serve as a supplemental textbook in some or all of the areas mentioned above and as a reference book for professionals who apply mathematics to engineering and computational areas of mathematics and physics

Contemporary Geometry Hung-Hsi Wu, 2013-06-29 Early one morning in April of 1987 the Chinese mathematician J Q Zhong died unexpectedly of a heart attack in New York He was then near the end of a one year visit in the United States When news of his death reached his Chinese American friends it was immediately decided by one and all that something should be done to preserve his memory The present volume is an outgrowth of this sentiment His friends in China have also established a Zhong Jia Qing Memorial Fund which has since twice awarded the Zhong Jia Qing prizes for Chinese mathematics graduate students It is hoped that at least part of the reasons for the esteem and affection in which he was held by all who knew him would come through in the succeeding pages of this volume The three survey chapters by Li and Treibergs Lu and Siu Chapters 1 3 all center around the areas of mathematics in which Zhong made noteworthy contributions In addition to putting Zhong s mathematical contributions in perspective these articles should be useful also to a large segment of the mathematical community together they give a coherent picture of a sizable portion of contemporary geometry The survey of Lu differs from the other two in that it gives a firsthand account of the work done in the People s Republic of China in several complex variables in the last four decades
