Encryption Keys

Reporting Services uses a symmetric key to encrypt credentials, connection strings, and other sensitive data that is stored in the report server database. You can manage this key by creating a backup. If you migrate or move the report server installation to another computer, you can restore the key to regain access to encrypted content.

Backup

Backup the key to a password protected file for report server recovery in case of emergency.

Backup

Restore

To restore the encryption key, click the Restore button. You must know the password that was used to protect the encryption key file.

Restore

Change

This operation replaces the encryption key with a newer version.

Change

Delete Encrypted Content

All stored connection strings, credentials, and encrypted values in a subscription will be deleted. After you delete this content, you must redefine all data source connections and subscriptions used on the report server
