Cell Growth R. J. M. Fry, M. L. Griem, W. H. Kirsten, 2014-05-12 Normal and Malignant Cell Growth is a compendium of papers from the Proceedings of the Third Cancer Training Grant of the University of Chicago that deals with the processes associated with malignant neoplasia as well as the cell proliferation kinetics of normal tissues One paper presents the techniques used in the study on the proliferation kinetics of hemopoietic stem cells suggesting that the hemopoietic stem cell population is not homogenous but consists of a primitive pluripotential stem cell A series of experiments at the Brookhaven National Laboratory investigates the relationship of cell survival specifically that of stem cells to the survival of the irradiated

test animal One result of the experiment shows a rapid migration of a number of stem cells from shielded marrow into unshielded marrow at the pressure of a rapid circulating pool The numbers of stem cells are somewhat dependent on the dose given to the unshielded marrow and are greater with the greater dose Another paper also investigates the four methods that are used in the study of cellular kinetics in human tumors This compendium can prove helpful for biochemists micro biologists cellular researchers and academicians involved in the study of cellular biology physiology or oncology
