THE URINARY SYSTEM

Metabolism of nutrients by body cells produces various wastes such as carbon dioxide and nitrogenous wastes (creatinine, urea, and ammonia), as well as imbalances of water and essential ions. The metabolic wastes and excesses must be eliminated from the body. Essential substances are retained to ensure proper body functioning.

Although several organ systems are involved in excretory processes, the urinary system bears the primary responsibility for removing nitrogenous wastes from the blood. In addition to this purely excretory function, the kidneys maintain the electrolyte, acid-base, and fluid balances of the blood. Thus, kidneys are major homeostatic organs of the body. Malfunction of the kidneys leads to a failure of homeostasis, resulting (unless corrected) in death.

Student activities in this chapter are concerned with identification of urinary system structures and with examining urine composition and physiological processes involved in urine formation. It also focuses on the composition of the body's fluid compartments and the water, electrolyte, and acid-base balance of these compartments.

Reproductive System Coloring Workbook Answers:

Physiology Coloring Workbook Kenneth Axen, Kathleen Vermitsky Axen, 1997 Physiology Coloring Workbook is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers, it features 250 striking original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively through coloring thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained and complex subjects are approached through the gradual introduction of simple drawings. The authors employ a logical and consistent use of color to convey information; for example, arterial blood is always red, whereas venous blood is blue and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy, and rehabilitation, medical technology, nutrition, physical education, allied health, and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis, The Cell, Transport Mechanisms, Nervous System, Muscle, Cardiovascular System, Renal System, Respiratory System, Gastrointestinal System, Metabolism, Endocrine System, Reproduction. **Children's Books in Print, 2007**, 2006

Anatomy & Physiology of Human Reproductive System Sayed Johon, S.J. Productions, 2021-04-03. Anatomy Physiology of Human Reproductive system is a Coloring Book for medical and College Students. There are 78 organs in the human body. Among these 5 organs are considered vital, which are brain, heart, kidney, liver, and lungs. It's not easy to memorize the whole anatomy section or all those 78 organs. But surprisingly, you can make it easy just by a simple trick. Let this book guide you; coloring the anatomical segment can be useful to both medical students and laymen. Make the process easier to recognize, memorized simultaneously. The descriptive books only give you information, but this book will help you to recognize the information. Color the body parts, then name the organs. It's the most effective way to gather knowledge in a creative way. There are other books that are similar to this: One Introduction to Anatomy, The Integumentary System, The Skeletal System, The Muscular System, The Nervous System, The Endocrine System, The Circulatory System, Lymphatic System, The Digestive System, The Respiratory System, The Urinary System, The Reproductive System.
