Biovalorisation of Wastes to Renewable Chemicals and Biofuels Navanietha Krishnaraj Rathinam, Rajesh Sani, 2019-10-15 Biovalorisation of Wastes to Renewable Chemicals and Biofuels addresses advanced technologies for converting waste to biofuels and value added products Biovalorisation has several advantages over conventional bioremediation processes as it helps reduce the costs of bioprocesses Examples are provided of several successfully commercialized technologies giving insight into developing potential processes for biovalorisation of different wastes Different bioprocess strategies are discussed for valorising the wastes coming from the leather industry olive oil industry pulp and paper winery textile and food industries as well as aquaculture A section on biorefinery for hydrocarbons and emerging contaminants is included to cover concepts on biodesulfurization of petroleum wastes leaching of heavy metals from E waste and bioelectrochemical processes for CO2 Chapters on algal biorefinery are also included to focus on the technologies for conversion of CO2 sequestration and wastewater utilization Biovalorisation of Wastes to Renewable Chemicals and Biofuels can be used as course material for graduate students in chemical engineering chemistry and biotechnology and as a reference for industrial professionals and researchers who want to gain a basic understanding on the subject Microbial Technologies for Wastewater Recycling and Management VINEET KUMAR, Joginder Singh, 2022-11-08 This book introduces the innovative and emerging microbial technologies for the treatment recycling and management of industrial domestic and municipal water and other wastewater in an environment friendly and cost effective manner It discusses existing methods and technologies up gradation of existing technologies and new technologies It also highlights opportunities in the existing technologies along with industrial practices and real life case studies Handbook of Pulp and Paper Technologists (the Smook Book) Gary A. Smook, 2001 Diagnosis and Fault Tolerance for Mechatronic Systems: Recent Advances Fabrizio Caccavale, Luigi Villani, 2003-09-05 The field of robotics continues to flourish and develop In common with general scientific investigation new ideas and implementations emerge quite spontaneously and these are discussed used discarded or subsumed at c ferences in the reference journals as well as through the Internet After a little more maturity has been acquired by the new concepts then archival publication as a scientific or engineering monograph may occur The goal of the Springer Tracts in Advanced Robotics is to publish new developments and advances in the fields of robotics research rapidly and informally but with a high quality It is hoped that prospective authors will welcome the opportunity to publish a structured presentation of some of the emerging robotics methodologies and technologies The edited volume by Fabrizio Caccavale and Luigi Villani concerns with a wide subject of modern engineering namely mechatronics. This new discipline has lately been receiving an increasing deal of attention for its unique connotation to represent a blend of mechanical electronic and information technologies In such a scenario the importance of providing the supervisory control system with fault detection and fault identification

capabilities becomes crucial to the effective development of mechatronic systems Paper Chemistry J.C. Roberts, 2012-12-06 Although the title of this book is Paper Chemistry it should be considered as a text about the chemistry of the formation of paper from aqueous suspensions of fibre and other additives rather than as a book about the chemistry of the raw material itself It is the subject of what papermakers call wet end chemistry There are many other excellent texts on the chemistry of cellulose and apart from one chapter on the accessibility of cellulose the subject is not addressed here Neither does the book deal with the chemistry of pulp preparation from wood from other plant sources or from recycled fibres for there are also many excellent texts on this subject The formation of paper is a continuous filtration process in which cellulosic fibres are formed into a network which is then pressed and dried The important chemistry involved in this process is firstly the retention of colloidal material during filtration and secondly the modification of fibre and sheet properties so as to widen the scope for the use of paper and board products As is the fashion these days each chapter is written by an internationally recognised expert in the field and my thanks are extended to all of the contributors for their hours of patient and unseen research during the preparation of their manuscripts The Handbook of Paper-Based Sensors and Devices Ghenadii Korotcenkov, 2025-07-25 This collection on materials and technologies is the first of a three volume handbook on all aspects of paper based devices from synthesis of nanocellulose and paper fabrication to discussion of features of fabrication of various flexible sensors and electronic devices on paper substrates Subsequent volumes address sensors and bio and environment engineering electronics and energy technologies The books also present a comprehensive and detailed analysis of all aspects of applications of these sensors and devices in environment monitoring biomedicine healthcare agriculture the food industry energy electronics optoelectronics and other domains Paper based bioengineering and environment engineering are also discussed in detail in these books. The books enable the reader to understand the present status of paper based sensors and devices and the role of paper in the development of new generation of sensors and electronic devices for various purposes with enhanced efficiency World renowned experts with extensive expertise in the development of nanocellulose based technology and paper based sensors and electronic devices comprise the contributors to this collection The Handbook of Paper Based Sensors and Devices is an authoritative reference for materials scientists biologists physicians and biochemical engineers as well as for chemical biomedical environmental electronics agriculture engineers and the food biotechnologists working in R Considers in detail the synthesis modification of nanocellulose intended for use in various fields Analyzes the specifics of manufacturing paper based flexible and wearable sensors and systems for various applications Nanoelectronics, Nanooptics, Nanochemistry and Nanobiotechnology, and Their **Applications** Olena Fesenko, Leonid Yatsenko, 2023-11-01 This book highlights some of the latest advances in nanotechnology and nanomaterials from leading researchers in Ukraine Europe and beyond It features contributions presented at the 10th International Science and Practice Conference Nanotechnology and Nanomaterials NANO2022 which
