RED. PANDAS Hello, boys and girls my name is Kira, and today I'll tell you about one of our greatest discoveries When most people see the word "panda," they think of the Big, furry, black-and-white Giant Panda. But the Lesser-known Red Panda, three times smaller, is also in Danger. Today classified as vulnerable, its status could Quickly change to endangered. The red panda is a living fossil. It has no close surviving relatives, and most resembles raccoons and skunks, not giant pandas. The red Pandas live in the eastern Himalayas and southwestern China. They primarily eat bamboo leaves and berries and Blossoms.

#### Red Panda Habits

Red Pandas mostly stay to themselves except During mating time that is during the day time. After about 134 days the red pandas give birth to one-four young. After Birth the red pandas mother cleans her cubs and recognizes It's by smell. Baby red pandas reach adult size about twelve Months. The babies are born in small holes in the trees. If The red pandas den is discovered more than once by a Human the mother eats her cubs. Their claws are partially Retractable. They have an extended bone which is like a thumb. Red pandas live up to twelve – fourteen years. Over the winter they lose 15% f body weight.

Like the giant pandas it has a false thumb. That is an extension of the wrist bone. The red panda is slightly larger than a domestic cat. It has reddish-brown fur, a long, shaggy tail and a waddling due to its shorter legs. The red panda is the only living species of the genus Ailurus and the Family Ailuridae. It's also in the bear families and also not closely related to the giant pandas. The red pandas have excellent camouflage against its habitat of moss- and Lichen- covered trees. The Snow leopards and wild dogs are the predators. The red pandas are most active during the ay.

Also the sad part about it that they only 2500 pandas left in the world. They are primarily hunt down the red panda because they use the fur to make hats and Jackets. That led their extinction for over years. FUN FACTS white pandas. They usually like to live alone, then in groups. Also red panda use their tongues to detect smell. Therefore, that's today's lesson before you take a break kids i need to ask everyone a question. "What choice will you make when you leave here today? Will you help the Red Pandas, or will you go about your normal routine? ~ By: Kira Checkley

*Molecular Ecology and Evolution* John C. Avise,2010 This volume is a reprinted collection of 69 classics from the Avise laboratory chosen to illustrate a trademark brand of research that harnesses molecular markers to scientific studies of natural history and evolution in the wild Spanning the early 1970s through the late 2000s these articles trace how the author and his colleagues have used molecular genetics techniques to address multifarious conceptual topics in genetics ecology and evolution in a fascinating menagerie of creatures with oft peculiar lifestyles The organisms described in this volume range from blind cavefish to male pregnant pipefishes and sea spiders from clonal armadillos to natal homing marine turtles from hermaphroditic sea snails to hybridizing monkeys and tree frogs from clonal marine sponges to pseudohermaphroditic mollusks to introgressing oysters and from endangered pocket gophers terrapins and sparrows to unisexual all female fish species to living fossil horseshoe crabs and even to a strange little fish that routinely mates with itself The conceptual and molecular topics addressed in this volume are also universal ranging from punctuated equilibrium to coalescent theory to the need for greater standardization

in taxonomy from cytonuclear disequilibrium statistics to the ideas of speciation duration and sympatric speciation from historical population demography to phylogenetic reconstructions of males sexual ornaments from the population genetic consequences of inbreeding to Pleistocene effects on phylogeography and from the molecular underpinnings of null alleles to the notion of clustered mutations that arise in groups to compelling empirical evidence for the unanticipated processes of gene conversion and concerted evolution in animal mitochondrial DNA Overall this collection includes many of the best most influential sometimes controversial occasionally provocative always intriguing or otherwise entertaining publications to have emerged from the Avise laboratory over the last four decades Thus this book conveys through the eyes of one of the field s longstanding pioneers what the organismal side of molecular ecology and evolution really means USDA Forest Service General Technical Report WO. Conventional wisdom holds that Western economies are on the threshold of fast and furious technological development. Fredrik Erixon and Bjorn Weigel refute this idea, bringing together a vast array of data and case studies to tell a very different story. With expertise spanning academia and the business world, Erixon and Weigel illustrate how innovation is being hampered by existing government regulations and corporate practices. Capitalism, they argue, has lost its mojo. Assessing the experiences of global companies including Nokia, Uber, IBM, and Apple, the authors explore three key themes: declining economic dynamism in Western economies, growing corporate reluctance to contest markets and innovate, and excessive regulation limiting the diffusion of innovation. At a time of low growth, high unemployment, and increasing income inequality, innovation-led growth is more necessary than ever. This book unequivocally details the obstacles hindering our future prosperity.
