Impact of Implementing Intelligence Community Information Technology Enterprise (IC ITE) within the Intelligence Community

Chapter I: INTRODUCTION:

The purpose of this paper is to explore how the Director of National Intelligence (DNI) can improve intelligence information sharing and integration. The Intelligence Community Information Technology Enterprise (IC ITE) is one way the DNI could improve intelligence information sharing and integration. Through the development and deployment of IC ITE services, the DNI has potential to provide to the Intelligence Community (IC) an automated, collaborative, secure, and dynamic environment with the necessary tools for IC integration and collaboration not previously experienced. The IC ITE operates under a blueprint of the National Intelligence Strategy (NIS) shaping priorities for IC agencies[1]. IC ITE services will be used by analysts, mission support users, and consumers of intelligence products. The majority of users have little or no knowledge of how IC ITE will impact mission, daily operations, funding, human resources, contracts, and acquisition practices. Some traditional methods currently used within the IC to assist analysis will change such as data access, programs, applications, and use of technology in the completion of daily activities.

This change will require new policies, agreements, and improvements in how users' access disseminates, and store data. In addition to those above, a culture shift and change in mindset are essential for full integration and collaboration. The full implementation of IC ITE will improve analysis for IC members, and consumers of information

Technology (IT) services. The IC IT Enterprise is the DNI's transformative workforce which is involved in crafting, projecting and orienting the vision based on the existing intelligence model. IC ITE moves seventeen disperse IC agencies into a single-centric IT architecture working on a common platform where the community quickly and securely shares technology, information, and resources[2]. By managing and providing the community's IT infrastructure and services as a single enterprise, the IC will not only be more efficient but will also establish a robust platform to deliver more innovative and secure technology to desktops at all levels across the intelligence enterprise. The result is seamless sharing and integration process is more of a procedure of improving collaboration between various intelligence departments[3]

The former Director shared his vision by moving most security organizations to to an entirely digital enterprise. The DNI wants to deliver all- intelligence analysis products anywhere and at any time in a digital format. IC ITE is essential in providing this capability in facilitating IC integration and collaboration.
