Methodology implies more than simply the methods you intend to use to collect data. It is often necessary to include a consideration of the concepts and theories which underlie the methods. For instance, if you intend to highlight a specific feature of a sociological theory or test an algorithm for some aspect of information retrieval or test the validity of a particular system, you have to show that you understand the underlying concepts of the methodology. The objective of this book is to present terms related to Research Methodology in a way that students and researchers can easily understand and can apply in their research project. The book is an alphabetical list of terms used in research that provide user-friendly definitions. There are many variations of terms within research efforts; however, most of the correlated terms in the book. The book is meant to cover the most practical and common research terms which are used in educational and the social and behavioural sciences. The Alphabetical arrangement of terms in this book is based on Rules for arrangement of various concepts and subjects in the scheme of classification of books called Colon Classification by Dr S R Ranganathan. The same is as follows:

1. Signs and symbols precede small and capital English alphabets in the order.
2. Small letters have been used after signs and all Capital letters used at last. For Example: Data, Data null, Data analysis plan, Data collection instrument, Data plural, singular datum, Data analysis, Data bank, Data collection.

The Connecting Symbol shall be taken to fall in the following sequence when arranged in the ascending sequence of absolute value: 0252. The absolute value of any Connective Symbol is less than that of any Substantive Digit. In other words, it is less than that of a 0253. The book is comprehensive, clear, and user-friendly. The book will be an indispensable reference tool for researchers, professionals, guides, and students.
