## CHAPTER 2: Literature Review

### Introduction

While extensive public and clinical research on CHD exists, scholarly information on the public policy system mechanisms, which help in creating awareness and preventing CHD in AAM, is non-existent. The problem revolves around the fact that even though earlier investigators have indicated a rise in CHD awareness among AAW, highest numbers of deaths attributed to the silent killer are reported in AAM (CDC, 2011). Because of this, the literature review will explore factors that contribute to the CHD epidemic affecting AAM from the socio-ecological perspective. Secondly, the negative health effects emanating from the cultural values and beliefs, socio-economic status, and environmental conditions that affect AAM's health jointly will be evaluated. Finally, a discussion of findings from previous literature examining the correlation between how AAM perceive health and its effect on attitude and behavior towards lifestyle choices and health are presented.

Public policy within the literature may be considered understandings, informal or formal rules, regulations, and laws, which are employed collectively for directing collective and individual behaviors among people (Schmid, Pratt, & Howze, 1995). The literature review is aimed at examining past literature from the socio-ecological viewpoint to provide an insight into how the health status of AAMs have been affected by cultural beliefs, socioeconomic status, and environmental conditions.
