

The Divorce Effects on Children

✓ Exclusively available on IvyPanda

Introduction

Divorce involves restructuring of the family where parents separate. When people get married, they get children in the union and who are under the care of both parents. Divorce causes emotional and psychological strain among the parents. The process of divorce is very involving and parents end up as opponents and seek to be independent (Roderick 6).

After divorce the parents reside in different houses and have to settle with the other about the custody of children. In most cases the children remain in custody of the mother. Although some people believe that parents absorb the major effects of divorce, I believe that divorce has a big effect on children than parents.

Discussion on how effects of divorce on children are more than effects on the parents

Emotional effects

According to Friedman (17), when parents divorce the family members are affected. The children as well as the parents have to adjust to changes and may take up to two years to settle down.

They often have emotions that are triggered by the divorce. In cases where children exposed and saw the parents engage in conflict, children find it more comfortable to live with a single parent and be not see the parents engage in quarrels.

On the other hand, some parents keep their differences secret from the children. When they divorce, such children usually have a harder time to cope with the change than children who knew their parents differences. Therefore parents can live in a marriage for the sake of the children.
