**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were divided into two groups: a control group and an exercise group. The exercise group performed a 12-week training program consisting of three sessions per week, each lasting 30 minutes. The control group did not exercise. The HR and HRR were measured at rest and during exercise at the beginning and end of the 12-week period. The results showed that the exercise group had a significant decrease in HR and HRR at rest and during exercise compared to the control group. The control group had no significant change in HR and HRR. The results suggest that a 12-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

- 2) When configuring a multi-invoice bill, set document id your System id: `FACTORYCUSTID`
- 3) If you are using the Invoice as a bill document, add a line item to the bill using the `FACTORYCUSTID` as a bill. In this scenario, a "Billing" document is created for the customer and the bill is not created. This is intended for the customer to purchase the type of multi-invoice bill, as pointing out the group approach in step 1.
- 4) Do not include the ID of invoice from a PO document.
- 5) When creating documents for a multi-invoice bill, ensure that the bill is on the same day as the PO document.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
  - Turn off the lights at the end of the work day.
  - If the lights are required, the length of the work day should be kept as short as possible.
- The end of the night period is the beginning of the day, so the longer the night period is, the longer the day period is. Therefore, the longer the night period is, the longer the day period is. This is a problem for the producer because the longer the day period is, the longer the night period is. This is a problem for the producer because the longer the day period is, the longer the night period is.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, suppose the price for the output rises. The producer will want to produce more of the output, and this will require hiring more workers.
