**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were 15 men, 40 to 50 years old, who had been sedentary for at least 1 year. They were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% to 70% of the maximum HR. The control group did not exercise. The HR and HRR were measured at rest and during a maximal exercise test at baseline and after 12 weeks. The results showed that the training program significantly increased the HR and HRR at rest and during the maximal exercise test. The control group showed no significant changes. The results suggest that a 12-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

If you are not satisfied with your results, follow the instructions carefully and test your original article. If the editor still requests the (a) paragraph and (b) and (c) paragraphs, repeat the analysis with the original data and the original results.

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun file: `mountmnt=/etc/netatun/`
24. If you're using the `afs` multi-mount method, add the following line to the `netatun` file: `afs=/etc/netatun/`. In this scenario, a Netatun rule will be applied to the network interface that is configured. This means you'll either be purchasing this type of multi-mount AFS, or pointing out the group you wish to assign it.
25. Do not include the `afs` of `mountmnt` in the `afs` configuration.
26. When configuring the `afs` multi-mount AFS, you can choose to use the `afs` or `afs` Netatun file.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light in commercial greenhouses. Likewise, plants are flowering the opposite way (e.g., in the middle of the night).
- Increased moisture in the soil will compete with the salt for absorption by the roots. The length of the growing season may be extended by the use of plastic mulch and irrigation.
- The soil pH can be lowered by the use of sulfur. However, the pH should not be lowered below 5.5, as this may cause the plants to suffer from iron deficiency. Sulfur should be used cautiously in these regions of arid soils.
- Growers should be aware of the EC (salinity) of the water.

When you install your T-Value One Connection, improper installation of all four screws (50 connections for One Connection®) will affect the overall health, safety and life of the system. Proper ventilation is critical to maintain proper ventilation. Failure to maintain proper ventilation may result in the following problems with the product:

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will lead to an increase in output, and a fall in the price of the output will lead to a decrease in output.
