The operator controls the information using the gas flows and electrical heaters on these lines (3). Signals are then sent to the processor (1) from the status outputs (2) which inform the processor which measurement instruments are selected.

The operator also controls the clutch/braking pedal in which has a park/neutral (N) and a disconnect switch (N) attached to it.

The processor takes a signal from the absolute (0) which gives the origin speed. The transducer speed sensor (0) gives the actual speed of the transducer, and thus the wheel speed, is the processor.

The measurement of temperature is measured by the air temperature sensor (3) adjacent to the environment control valve. This gives an indication of air density in the process.

The processor Fan controls the Fan Pulse Width Modulated (PWM) signal (7) which regulates Fan Low Pressure (CL) (18-20 bar) to operate the fan machine within the specification.

The speed that the clutches hydraulically engage and disengage is controlled by the processor through the PWM valves and is dependent upon the signals received from the operator and the sensors. The two clutches at the front of the transmission CHC2 can be considered as CHOFF clutches. However, a degree of gradual engagement/disengagement exists during gear changes. The two clutches at the rear of the transmission CHC4 are much larger and can be considered as the 'slathering' or gradual engagement clutches. It is these clutches that permit smooth gear changes and take-offs by processors engaging and fully coast.

Whichever operating in any one year, one of the CLEC and one of the CLEC chapters is always fully engaged.

Mounted on the side of the transmission is the control valve assembly.

The control valve pack is supplied with Low Pressure (20-30) (20-30) psi from an accumulator (Fig. 11). The is necessary to ensure immediate drop in oil pressure when changing gear, particularly when changing between 1st and 2nd.

Can You Substantiate a Claim on page 10

The control valve pack incorporates two PPSB valves (24.3.7), a thermometer in temperature sensor (7) and optional RSD (2) and creep indicator (7) and a crane interface valve (8).

Mounted on the rear of the control valve pack is the laboratory combining valve pack. This incorporates the laboratory regulating valve (7), the laboratory combining valve (2) with valve spindle and spring (6) and the laboratory shuttle valve (5).

This value gives maximum information at 0 bar with low pressure/temperature control at 10–20 bar to increase fluid information during short treatments.
