New Trends in Neural Computation José Mira, Joan Cabestany, Alberto Prieto, 1993-05-27 Neural computation arises from the capacity of nervous tissue to process information and accumulate knowledge in an intelligent manner Conventional computational machines have encountered enormous difficulties in duplicating such functionalities This has given rise to the development of Artificial Neural Networks where computation is distributed over a great number of local processing elements with a high degree of connectivity and in which external programming is replaced with supervised and unsupervised learning The papers presented in this volume are carefully reviewed versions of the talks delivered at the International Workshop on Artificial Neural Networks IWANN 93 organized by the Universities of Catalonia and the Spanish Open University at Madrid and held at Barcelona Spain in June 1993 The 111 papers are organized in seven sections biological perspectives mathematical models learning self organizing networks neural software hardware implementation and applications in five subsections signal processing and pattern recognition communications artificial vision control and robotics and other applications

Development Of Mathematics Between The World Wars, The: Case Studies, Examples And Analyses Martina Becvarova, 2021-05-14 The Development of Mathematics Between the World Wars traces the transformation of scientific life within mathematical communities during the interwar period in Central and Eastern Europe specifically in Germany Russia Poland Hungary and Czechoslovakia Throughout the book in depth mathematical analyses and examples are included for the benefit of the reader World War I heavily affected academic life In European countries many talented researchers and students were killed in action and scientific activities were halted to resume only in the postwar years However this inhibition turned out to be a catalyst for the birth of a new generation of mathematicians for the emergence of new ideas and theories and for the surprising creation of new and outstanding scientific schools The final four chapters are not restricted to Central and Eastern Europe and deal with the development of mathematics between World War I and World War II After describing the general state of mathematics at the end of the 19th century and the first third of the 20th century three case studies dealing with selected mathematical disciplines are presented set theory potential theory combinatorics in a way accessible to a broad audience of mathematicians as well as historians of mathematics

New Trends in Intelligent Software Methodologies, Tools and Techniques Ali Selamat, Sigeru Omatu, 2017-09-15 Software is an essential enabler for science and the new economy It creates new markets and directions for a more reliable flexible and robust society and empowers the exploration of our world in ever more depth but it often falls short of our expectations Current software methodologies tools and techniques are still neither robust nor reliable enough for the constantly evolving market and many promising approaches have so far failed to deliver the solutions required This book presents the keynote Engineering Cyber

Physical Systems and 64 peer reviewed papers from the 16th International Conference on New Trends in Intelligent Software Methodology Tools and Techniques SoMeT_17 held in Kitakyushu Japan in September 2017 which brought together researchers and practitioners to share original research results and practical development experience in software science and related new technologies The aim of the SoMeT conferences is to capture the essence of the new state of the art in software science and its supporting technology and to identify the challenges such technology will have to master The book explores new trends and theories which illuminate the direction of developments in this field and will be of interest to anyone whose work involves software science and its integration into tomorrow s global information society

New Trends in Analysis and Geometry Mohamed A. Khamisi, 2020-01-24 This unique mathematical volume brings together geometers analysts differential equations specialists and graph theorists to provide a glimpse on recent mathematical trends whose commonalities have hitherto remained for the most part unnoticed The applied mathematician will be pleasantly surprised with the interpretation of a voting system in terms of the fixed points of a mapping given in the book as much as the classical analyst will be enthusiastic to find detailed discussions on the generalization of the notion of metric space in which the metric takes values on an abstract monoid Classical themes on fixed point theory are adapted to the diverse setting of graph theory thus uncovering a set of tools whose power and versatility will be appreciated by mathematicians working on either area The volume also includes recent results on variable exponent spaces which reveal much needed connections with partial differential equations while the incipient field of variational inequalities on manifolds also explored here will be of interest to researchers from a variety of fields

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by

Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

The International Commission on Mathematical Instruction, 1908-2008: People, Events, and Challenges in Mathematics Education Fulvia Furinghetti, Livia Giacardi, 2023-01-30 The book presents the history of ICMI through a prosopographical approach In other words it pays a lot of attention to the actors of the International movement The portraits of the members of the ICMI Central Committees 1908 1936 and ICMI Executive Committees 1952 2008 and other eminent figures in ICMI history who have passed away in the first 100 years of its life are the guiding thread of the volume Each portrait includes Biographical information An outline of the various contributions made by the individual in question to the study of problems pertaining to mathematics teaching education Primary bibliography Secondary with particular attention to the publications concerning the teaching of mathematics Images photos book frontispieces relevant manuscripts The authors of the portraits 30 altogether are researchers in the history of mathematics mathematics and mathematics education The focus on the officer's role within ICMI and on his/her contributions to mathematics education make the portraits different from usual biographies In particular since most officers were active mathematicians the portraits shed light on aspects of their lesser known activity Connecting chapters place the action of these figures in the historical context and in the different phases of ICMI history New Trends in Statistical Physics Alfredo Macias, Leonardo Dagdug, 2010 Prof Leopoldo Garcia Colin will become 80 years old in 2010 therefore we are interested in the publication of a Festschrift book to honor him Prof Garcia Colin has worked in many different fields of statistical physics and has applied it to biological physics solid state physics relativity and cosmology We are planning a 500 pages book with original and peer reviewed articles from his friends and former students We may buy about 100 copies of it **How to Find Out in Mathematics** John E.

Pemberton, 2014-05-15 **How to Find Out in Mathematics** A Guide to Sources of Information Second Revised Edition presents updated topics about probability and statistics dictionaries and encyclopedias computing and mathematical education The book discusses the modifications of the content of professional actuarial examinations the assimilation of modern mathematics into the school curriculum and the establishment of government departments to administer financial support for mathematical research The text also describes the efforts to improve communication between mathematicians i.e. the inception of the Mathematical Offprint Service and the publication of Contents of Contemporary Mathematical Journals by the American Mathematical Society People who are studying teaching or applying mathematics will find the book helpful
