Writing an essay on the topic of "Perspective Essay Topics" can be both challenging and rewarding. The difficulty lies in the vastness of perspectives that one can explore within this theme. The sheer diversity of perspectives that individuals hold on any given subject makes it a complex task to present a comprehensive and unbiased view.

To begin with, selecting a specific angle or perspective to focus on can be daunting. The plethora of potential topics within the broader theme requires careful consideration to choose one that is not only interesting but also allows for meaningful exploration. Once a topic is selected, the challenge shifts to presenting a balanced view that encompasses various perspectives without leaning too heavily towards one side.

Moreover, conveying these perspectives in a coherent and organized manner is a crucial aspect of essay writing. Juggling different viewpoints while maintaining a logical flow demands a high level of skill in structuring the essay. Striking a balance between depth and clarity is another hurdle, as delving too deep into individual perspectives may risk losing the overall coherence of the essay.

Furthermore, the research process for a perspective essay can be time-consuming. Gathering information to represent diverse viewpoints requires extensive reading and analysis. It involves navigating through a multitude of sources, critically evaluating each, and synthesizing the information to construct a well-rounded narrative.

Addressing potential counterarguments is yet another layer of complexity. Acknowledging opposing viewpoints and effectively refuting them demands a nuanced understanding of the subject matter and sharp analytical skills. This adds depth to the essay but also increases the level of difficulty.

In conclusion, crafting an essay on "Perspective Essay Topics" involves navigating through the complexities of topic selection, structuring, research, and addressing counterarguments. It is a challenging yet rewarding endeavor that requires a keen understanding of the subject matter and the ability to present diverse perspectives in a coherent and engaging manner.

breeding science in the last two decades The continued interest is promoted by its huge potential impact on the efficiency of breeding Predicting a breeding value based on molecular markers and phenotypic values of relatives may be used to manipulate three parameters of the breeder's equation First the accuracy of the selection may be improved by predicting the genetic value more reliably when considering the records of relatives and the realized genomic relationship Secondly genotyping and predicting may be more cost effective than comprehensive phenotyping Resources can instead be allocated to increasing population sizes and selection intensity The third probably most important factor is time As shown in dairy cattle breeding reducing cycle time by crossing selection candidates earlier may have the strongest impact on selection gain Many different prediction models have been used and different ways of using predicted values in a breeding program have been explored We would like to address the questions i How did GS change breeding schemes of different crops in the last 20 years ii What was the impact on realized selection gain iii What would be the best structure of a crop specific breeding scheme to exploit the full potential of GS iv What is the potential of hybrid prediction epistasis effect models deep learning methods and other extensions of the standard prediction of additive effects v What are the long term effects of GS vi Can predictive breeding approaches also be used to harness genetic resources from germplasm banks in a more efficient way to adapt current germplasm to new environmental challenges This Research Topic welcomes submissions of Original Research papers Opinions Perspectives Reviews and Mini Reviews related to these themes 1 Genomic selection statistical methodology 2 The optimal use of GS in breeding schemes 3 Practical experiences with GS selection gain long term effects negative side effects 4 Predictive approaches to harness genetic resources Concerning point 1 If an original research paper compares different methods empirically without theoretical considerations on when one or the other method should be better the methods should be compared with at least five different data sets The data sets should differ either in crop genotyping method or its source for instance from a breeding program or gene bank accessions Concerning point 2 Manuscripts addressing the use of GS in breeding schemes should illustrate breeding schemes that are run in practice General ideas about schemes that may be run in the future may be considered as Perspective articles Conflict of Interest statements Topic Editor Valentin Wimmer is affiliated to KWS SAAT SE Co KGaA Germany Topic Editor Brian Gardunia is affiliated to Bayer Crop Sciences and has a collaboration with AbacusBio and is an author on patents with Bayer Crop Sciences The other Topic Editors did not disclose any conflicts of interest Image credit CIMMYT reproduced under the CC BY NC SA 2.0 license
